The results of Comprehensive Survey of Living Conditions 2010 （in Japanese）are posted on the website of the Ministry of Health，Labour and Welfare．
Website of the Ministry of Health，Labour and Welfare（URL）：http：／／www．mhlw．go．jp

## [Explanatory Notes]

(1) The meaning of symbols is as follows
"-" indicates that the figure does not exist.
$" \cdot "$ indicates that the statistic is not possible.
$" \ldots$ " indicates that the figure was unknown or is unsuitable for representation.
" 0.0 " indicates that the figure is lower than half of one represented unit.
$" \triangle$ " indicates that the figure is a decreasing value/rate.
(2) Figures in tables may not agree exactly with the sum of itemized totals due to fractional amounts being rounded.
(3) The source of the figures of 1985 and before of the items concerning "Households" is "Basic Survey on Health and Welfare Administration (Statistics and Information Department, Ministry of Health and Welfare)".
(4) Values of 1995 does not include data of Hyogo Prefecture because the survey was not implemented in Hyogo Prefecture due to the impact of the Great Hanshin-Awaji Earthquake.

## Outline of the Survey

## 1 Objective

The objective of this survey is to investigate basic matters of people's life such as health, medical care, welfare, pension and income, and thereby provide a basis for the planning and operation of health, labour and welfare administration. The survey was initiated in 1986. Large-scale surveys are implemented every 3 years and small-scale surveys are implemented in each of the interim years.

The 9th large-scale survey was implemented for 2010.

## 2 Coverage and Object

Households and household members nationwide are covered. The object of the household questionnaire and the health questionnaire is the entire household (around 290,000 households) and household member (around 750,000 persons) in the 5,510 areas selected by stratified random sampling from the sub district number 1 and 8 of the 2005 Population Census's enumeration district. The object of the long-term care questionnaire is the persons requiring long-term care or requiring support under the Long-Term Care Insurance Act (around 7,000 persons) in the 2,500 districts selected from the aforementioned 5,510 areas selected by stratified random sampling. The object of the income questionnaire and the savings questionnaire is the entire household (around 40,000 households) and household member (around 100,000 persons) in the 2,000 unit areas selected by stratified random sampling from the unit areas under the aforementioned 5,510 areas having the sub district number 1 .

However, the following persons are excluded from the object of the survey.

1) Household/Health/Long-Term care questionnaire

The following persons who are absent from household:
Business bachelor, migrant worker, extended business trip (for about more than 3 months), student overseas, person living in a social welfare institution, long-term inpatient (and whose resident registrations are transferred to the hospital), boarded out foster child, prisoner and other persons living apart from households
2) Income/Savings questionnaire

The absent persons listed under the "Household questionnaire" above, households and household members who have moved in or out after the date of the survey on the household questionnaire, and one-person household living in a dormitory or a boarding house.
(Note: 1 "Sub district number" is a number indicating the types of the enumeration district of the Population Census. " 1 " indicates general survey districts and " 8 " largely indicates the districts where dormitories, etc., in which 50 or more single persons are living, exist.
2 "Unit area" is the Population Census survey area geographically divided in order to improve precision of estimates, to share and alleviate the burden of enumerators, etc.)

## 3 Survey Implementation Date

Household/Health/Long-Term care questionnaire $\cdot \ldots . . . . . . . . . .$. June 3 (Thursday), 2010
Income/Savings questionnaire .................................................. 15 (Thursday), 2010

## 4 Survey Items

Household questionnaire:
Status of one-person household, total household expenditure in May, relationship with householder, gender, year and month of birth, marriage status, status of participation in medical insurance, status of receipt of public pension, status of participation in public pension, status of employment, etc.
Health questionnaire:
Subjective symptoms, hospital visit, health problems in daily living, subjective health condition, worries and stress, mental state, attendance of health checkups, etc.

Long-term care questionnaire:
Gender and year/month of birth of persons requiring long-term care, care requirement level, cause of care requirement, use of in-home service, care hours of principle carer, Type of care given by family and business operators.
Income questionnaire:
Income and tax during the previous one year by income type, status of self-assessed living-conditions, etc.
Savings questionnaire:
Current balance of savings and debts, etc.

## 5 Survey Method

The respondent himself/herself filled out the questionnaire which was distributed by an enumerator in advance, and the enumerator collected the questionnaire at a later date. The health questionnaire and savings questionnaire was collected after sealed, and the income questionnaire was also sealed but only when it was absolutely necessary.

## 6 Route of the survey

- Household/Health/Long-term care questionnaire

Ministry of
Health,
Labour and
Welfare

- Prefecture $\qquad$ Public health $\qquad$ - Instructor - Enumerator Household
$\qquad$ City with a public center
$\qquad$
Special wards

## 7 Tabulation of Results and Objects of Tabulation

The results were tabulated by Statistics and Information Department, Minister's Secretariat, Ministry of Health, Labour and Welfare.

The numbers of the objects surveyed, responded and tabulated were as follows:

|  | Number of survey <br> objects | Number of objects <br> responded | Number of objects <br> tabulated <br> (excluding those which were <br> unable to tabulate) |
| :--- | :---: | :---: | :---: |
| Household/Health <br> questionnaire | 289,363 households | 229,785 households | 228,864 households |
| Income questionnaire | 35,971 households | 27,225 households | 26,115 households |
| Long-term care <br> questionnaire | 7,192 persons | 6,176 persons | 5,912 persons |

## Outline of the Results

## I Number of households and number of household members

## 1 Structure of household and types of household

The total number of households in Japan as of June 3, 2010 was 48,638,000.
In the breakdown by structure of household, "households with a couple and unmarried children only" were the most common, with $14,922,000$ ( $30.7 \%$ of total households), followed by "one-person households," with $12,386,000(25.5 \%)$, then "households with a couple only," with $10,994,000$ (22.6\%).

In the breakdown by type of household, there were 10,207,000 "aged households" (21.0\% of total households), and 708,000 "mother-child households" (1.5\%). (Table 1, Figure 1)

Table 1 Trends in the number of households and average number of household members, by structure and type of household

Figure 1 Trends in the number of households and percentage distribution, by number of household members

Note: The figures of 1995 exclude those of Hyogo prefecture.

## 2. Households with persons aged 65 years and over

There were $20,705,000$ households with persons aged 65 and over ( $42.6 \%$ of total households).
In the breakdown by structure of household, "households with a couple only" were the most common, with $6,190,000$ ( $29.9 \%$ of households with persons aged 65 and over), followed by "one-person households," with $5,018,000(24.2 \%)$, then "households with parents and unmarried children only," with $3,837,000$ (18.5\%).

Regarding annual trends, households with persons aged 65 and over make up an increasing proportion of total households. (Table 2, Figure 2)

Table 2 Trends in the number of households with persons aged 65 years and over and its percentage distribution, by structure of household

| Year | Households with persons aged 65 and over | as a percentage of all households (\%) | One-person households | Households with a couple only | Households with a couple and unmarried children only | Threegeneration family households | Other households | (Regrouped) Households with persons aged 65 and over only |

## 3 Persons aged 65 years and over

In the breakdown of persons aged 65 and over by type of family, "living with children" was the most common, with $12,577,000$ ( $42.2 \%$ of persons aged 65 and over), followed by "households with a couple only" (where one or both are aged 65 and over), with $11,065,000$ ( $37.2 \%$ ), then "one-person households," with 5,018,000 (16.9\%).

Looking at annual trends, the proportion of people in "one-person households" and "households with a couple only" is increasing. Additionally, the proportion of people in "households with children" is decreasing, but the proportion of "living with children without spouse" is increasing. (Table 4, Figure 4)

Regarding "one-person households" by sex and age-group, male "aged 65 to 69 " and female "aged 75 to 79 " make up the largest shares, with $30.5 \%$ and $24.0 \%$ respectively. (Figure 5)

Note: The figures of 1995 exclude those of Hyogo prefecture.

Figure 5 Percentage distribution of one-person households with a person aged 65 years and over, by sex and age group

There were $12,324,000$ households with children ( $25.3 \%$ of total households).
In the breakdown by structure of household, "households with a couple and unmarried children only" were most common, with $8,669,000$ ( $70.3 \%$ of households with children), followed by "three-generation family households," with $2,320,000$ (18.8\%).

Regarding annual trends, households with children make up a decreasing proportion of total households. (Table 5)

Table 5 Trends in the number of households with children and the average number of children, by structure of household

Note: The figures of 1995 exclude those of Hyogo prefecture.
The proportion of mothers "with job" in households with children was $60.2 \%$. In the breakdown by the age-group of the youngest child, the proportion of "with job" increases as the age-group of the youngest child rises.

The proportion of "with job" is higher than in 2001 across all age-groups. (Figure 6)
Figure 6 Percentage of mothers with job, by age group of the youngest child

[^0]Regarding the daily average working hours of mothers with job, by age-group of the youngest child, the group working " 0 to 2 hours" was largest for children "aged 0", at $44.4 \%$. The group working " 4 to 6 hours" increases with the age of the child from 0 to 8 years old, accounting for $30.6 \%$ of mothers with job for children "aged 7 to 8 ". Further, the group working " 8 to 10 hours" increases with the age of the child from 7 to 17 , accounting for $35.5 \%$ of mothers with job for children "aged 15 to 17". (Figure 7)

Figure 7 Percentage distribution of the daily average working hour groups of mothers with job, by age group of the youngest child or infant

Note 1) A daily average working hour is the working hour during May 24 th to 30 th divided by the number of working days of the same period.
2) Values do not include mothers whose "Average working hour is not stated".

Regarding the type of daytime child-care for the youngest child or infant of mothers with job, by the age of the youngest child, at "age 0 ", "father and mother" make up the largest proportion, at $69.2 \%$, and from "age 1 " to "age 6 ", "authorized nursery center" accounts for more than 50\%. Additionally, the proportion at "kindergarten" increases as the age rises from "age 3 " to "age 6 ", accounting for $43.5 \%$ at "age 6." (Figure 8)

Figure 8 Distribution of daytime child-care in households with a mother with job, by age of the youngest child or infant (multiple responses)

## 5 Employment of persons aged 15 years and over

Regarding the breakdown of the employment status of persons aged 15 and over by sex and age-group, more than $90 \%$ of male in the groups "aged 30 to 34 " to "aged 50 to 54 " were "with job," forming a trapezoid. For female, an "M" pattern was observed, with those in the group "aged 35 to 39 " representing the trough. (Table 6, Figure 9)

In the breakdown of female with job by age-group, presence of spouse and presence of child, the distribution for those "with spouse, with children" forms a hill pattern with the group "aged 45 to 49 " representing the peak. The distribution for those "with spouse, without children" forms an "M" pattern with the group "aged 35 to 39 " representing the trough.

Further, the proportion of those "without spouse, with children" was above $80 \%$ for the groups "aged 25 to 29 " to "aged 50 to 54 ," forming a trapezoid pattern. The distribution for those "without spouse, without children" was also a trapezoid pattern with a gentle drop off to the right, with the group "aged 25 to $29^{\prime \prime}$ representing the peak. (Figure 10)

Figure 11 Percentage distribution of employees other than executives, aged 15 years and over, by sex and age group

[^1]In the breakdown of non-executive employees by sex, age-group and educational attainment, the proportion of "regular employees or staff" increased as the educational level rises for both male and female. For female, the proportion of "non-regular employees or staff" also tended to increase with age, for all educational levels. (Figure 12)

Figure 12 Percenatge distribution of employees other than executives, aged 15 years and over, by sex, age group and educational attainment

Graduate of a university or graduate school

Note: 1. Values do not include persons whose "Called title at workplace is not stated".
2. Values do not include persons who are "In education".

## II Income etc. of various types of households

The income under " 2010 survey" means the income during one year from January 1 to December 31, 2009. Savings and debts refers to the current amount or balance as of June $30^{\text {th }} 2010$.
"Self-assessed living conditions" are those as of the date of when it inquired.

## 1 Income in each year

The average income per household, which is calculated on the basis of all the households in 2009, was $5,496,000$ yen, an increase of $0.4 \%$ compared to the previous year. The average income of aged household was $3,079,000$ yen and the average income of household with children was $6,973,000$ yen. (Table 8, Figure 13)

Table 8 Trends in the average income per household

|  |  | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | 2008

Figure 13 Trends in the average income per household

Note: The figures of 1994 exclude those of Hyogo prefecture.

## 2 Distribution of income

Regarding the relative frequency distribution by income group, the largest was " 2 million yen or more and less than 3 million yen" and accounted for $13.5 \%$, followed by " 3 million yen or more and less than 4 million yen" which accounted for $13.1 \%$.

The median (the border line which bisects the order of the lowest to the highest income) was $4,380,000$ yen, and the proportion earning less than the average income ( $5,496,000$ yen) was 61.4\%. (Figure 14)

Figure 14 Relative frequency distribution of households, by income group

Regarding the cumulative frequency distribution by income group of households with an "average income amount or less", the percentage of "less than 5 million yen" was $56.3 \%$. Since 2001, it has been kept more than $50 \%$. (Figure 15)

Figure 15 Cumulative frequency distribution of households below average income, by income group

## 3 Income by age group of the householder

Regarding the average income amount per household by age group of the householder, "aged 50 to 59 " was the highest with $7,319,000$ yen, followed by "aged 40 to 49 " and "aged 30 to 39 ". The lowest was "aged 29 and younger" with $3,010,000$ yen.

In the same way, regarding the average income amount per household member, "aged 50 to 59 " was the highest with $2,490,000$ yen. The lowest was "aged 29 and younger" with 1,636,000 yen. (Table 9, Figure 16)

Table 9 Average income per household and per household member, by age group of householder
Unit: 10,000 yen)

| 2010 survey |  |  |  |  |  |  |  |  |

Figure16 Average income per household and per household member, by age group of householder

## 4. Income by type of household

Regarding the distribution of households by income group, the proportion below average income was $95.1 \%$ for "mother-child households" and $90.3 \%$ for "aged households".

Average income per household member was 1,979,000 yen for "aged households" and 1,669,000 yen for "households with children". (Table 10, Figure 17)

Table 10 Distribution and average income of households, by income group

| Income group | All households |  | Aged households |  | Households with children |  | Mother-child householeds |  |

| Aged households | 100.0 | 17.3 | 70.2 | 5.9 | 0.8 | 5.7 |
| Households with children | 100.0 | 89.8 | 4.6 | 2.0 | 1.6 | 2.0 |
| Mother-child households | 100.0 | 75.2 | 3.5 | 1.3 | 15.2 | 4.7 |

Average earned income per household was $5,430,000$ yen, and in the breakdown by type of earned income (the total of each type of income divided by the number of households with that type of income), "employee's income" was $5,384,000$ yen. The annual trend of "employee's income" shows a decrease. (Table 12)

Regarding the breakdown of average earned income per household by type of household, "households with children" earned 6,375,000 yen, and "aged households" earned 2,269,000 yen. (Figure 13)
Table 12 Trends in the average earned income per household with earned income (by type) and per member with job
(Unit: 10,000 yen)

Table 13 The average earned income per household with earned income (by type) and per member with job

## 5 Self-assessed living-conditions

Regarding the percentage distribution of households by self-assessed living-conditions, "Difficult" ("Very difficult" and "Somewhat difficult") accounted for $59.4 \%$ and "Normal" accounted for $35.8 \%$.

Regarding the trends, the percentage of households that answered "Difficult" tends to increase in recent years. (Figure 18)

Figure18 Trends in the percentage distribution of households by self-assessed living-conditions

Regarding the percentage distribution of diversified households by self-assessed living-conditions, $85.6 \%$ of the "Mother-child household" and $65.7 \%$ of the "Households with children" answered "Difficult" (Figure 19).

Figure 19 Percentage distribution of the number of households by self-assessed living-conditions, for all the households and specific households

## 6. Savings and debts

Regarding savings, for all households, $86.2 \%$ were "with savings" and the "average savings per household" was $10,786,000$ yen. For "mother-child households" $68.9 \%$ were "with savings" and the "average savings per household" was $3,319,000$ yen.

Additionally, looking at the breakdown of households "with savings" by savings-group, $7.2 \%$ of "all households" but $18.6 \%$ of "mother-child households" had savings of " 500,000 yen or less".

Looking at debts, for all households, $31.2 \%$ were "with debts" and the "average debts per household" was $4,417,000$ yen. For households with children, $52.6 \%$ were "with debts" and the "average debts per household" was $8,674,000$ yen. (Table 14)

Table 14 Percentage distribution of households, by savings group and debt group
(Unit: \%)
2010

|  | All households | Aged households | Households with children | Mother-child households |
| :---: | :---: | :---: | :---: | :---: |

Regarding the current balance of savings in 2010, $44.6 \%$ of "all households" said "savings have decreased" since the previous year. For "aged households" the figure was $44.1 \%$ and for "households with children" 43.8\%.

Looking at the reason for the decrease among households with decreased savings, "expenditure on ordinary living expenses" accounted for $67.6 \%$ of "all households," $82.4 \%$ of "mother-child households" and $69.8 \%$ of "households with children." (Table 15, Figure 20)

## 7. Poverty rate

The 2009 poverty line (half of the median equivalent disposable income) was $1,120,000$ yen (real value), and the "relative poverty rate" (the proportion of households below the poverty line) was $16.0 \%$. The "child poverty rate" (aged 17 or under) was $15.7 \%$.

For members of "active households with children" (households with children where the householder is aged 18 to 64), the poverty rate was $14.6 \%$. Contributing to this was a poverty rate of $50.8 \%$ for households with "one adult" and $12.7 \%$ for households with "two or more adults." (Table 16, Figure 21)

Table 16 Trends in the poverty rate

|  | 1985 | 1988 | 1991 | 1994 | 1997 | 2000 | 2003 | 2006 | 2009 |

| Median (b) | 216 | 226 | 246 | 255 | 259 | 240 | 233 | 228 | 224112 |
| Poverty line ( $\mathrm{b} / 2$ ) | 108 | 113 | 123 | 128 | 130 | 120 | 117 | 114 |  |

Note: 1. The figures of 1994 exclude those of Hyogo prefecture.
2. Poverty rate is calculated using the OECD standard.
3. An adult is a person aged 18 years or over; a child is a person aged 17 years or under; an active household is a household in which the head of the household is aged between 18 and 65 years.
4. Household members whose equivalent disposable income is not stated are excluded.
5. Current prices means the equivalent disposable income for that year; real prices means the current price adjusted using the consumer price index (general, excluding imputed rent) using 1985 as a base.

Figure 21 Trends in the poverty rate

Regarding the cumulative frequency distribution of household members by equivalent disposable income, "all household members" and "children (aged 17 or under)" show a similar distribution. (Figure 22)

Figure 22 Cumulative frequency distribution of household members by equivalent disposable income

The cumulative frequency distribution for members of active households with children shows a similar distribution for both "all members of active households with children" and "members of households with 2 or more adults."

Additionally, "members of households with one adult" show a distribution concentrated on equivalent disposable incomes in the 300,000 to $1,600,000$ yen range. (Figure 23)

Figure 23 Cumulative frequency distribution of household members of active households with children, by equivalent disposable income

## III Health of Household Members

## 1. Subjective symptoms

The number of persons with subjective symptoms such as illness or injury (complainants) was 322.2 per thousand population (this proportion termed "complainant ratio").

In the breakdown of complainant ratio (per thousand population) by sex, the figure for female, at 355.1, was higher than for male, at 286.8.
In the breakdown by age-group, the figure was lowest for those "aged 10 to 19 ", at 203.4. The number rose with age-group, reaching 525.1 for those "aged 80 and over". (Table 17)

In the breakdown by symptoms, among male, "lower back pain" had the highest complainant ratio, followed by "shoulder stiffness" and "blocked or runny nose," and among female, "shoulder stiffness" had the highest complainant ratio, followed by "lower back pain" and "joint pain in hands and feet". (Figure 24)

Table 17 Complainant ratio, by sex and age group (per thousand population)

| Age group | 2010 |  |  | 2007 |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: |
|  | Total | Male | Female | Total | Male | Female |
| Total | 322.2 | 286.8 | 355.1 | 327.6 | 289.6 | 363.3 |
| Age 9 and under | 248.1 | 252.8 | 243.2 | 239.8 | 247.8 | 231.3 |
| $10-19$ | 203.4 | 207.3 | 199.3 | 203.3 | 200.4 | 206.4 |
| $20-29$ | 221.9 | 178.5 | 264.7 | 224.9 | 178.6 | 270.5 |
| $30-39$ | 272.4 | 225.7 | 317.1 | 273.9 | 229.1 | 317.3 |
| $40-49$ | 292.1 | 246.0 | 336.5 | 295.5 | 247.8 | 341.4 |
| $50-59$ | 321.3 | 275.9 | 364.8 | 338.1 | 289.2 | 385.0 |
| $60-69$ | 381.6 | 350.9 | 410.1 | 416.2 | 381.2 | 449.1 |
| $70-79$ | 484.3 | 454.9 | 509.1 | 508.9 | 479.6 | 533.3 |
| Age 80 and over | 525.1 | 518.4 | 528.9 | 543.3 | 531.1 | 550.2 |
| (Regrouped) |  |  |  |  |  |  |
| Age 65 and over | 471.1 | 443.7 | 492.5 | 496.0 | 464.8 | 520.6 |
| Age 75 and over | 517.5 | 500.0 | 529.0 | 538.3 | 516.8 | 552.5 |

Note 1. Hospital inpatients are not included in the number of complainants, but are included in the denominator which is the number of household members.
2. "Total" includes persons whose age is not stated.

Figure 24 Top 5 symptoms in terms of ratio of complainants, by sex (multiple responses)

Note: Hospital inpatients are not included in the number of complainants, but are included in the denominator which is the number of household members.

## 2. Hospital visit

The number of persons visiting hospital due to diseases (outpatients) was 370.0 per thousand population (this proportion termed "outpatient ratio").

In the breakdown of outpatient ratio (per thousand population) by sex, the figure for female, at 390.4, was higher than for male, at 348.1.
In the breakdown by age-group, the figure was lowest for those "aged 10 to 19 ", at 150.7. The number rose with age-group, reaching 710.0 for those "aged 80 and over". (Table 18)
In the breakdown by diseases, among male, "high blood pressure" had the highest outpatient ratio, followed by "dental diseases" and "diabetes", and among female, "high blood pressure" had the highest outpatient ratio, followed by "hyperlipidemia (hypercholesterolemia)" and "dental diseases". (Figure 25)

Table 18 Ratio of outpatients visits, by sex and age group (per thousand population)

| Age group | 2010 |  |  | 2007 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Total | Male | Female |
| Total | 370.0 | 348.1 | 390.4 | 333.6 | 311.3 | 354.6 |
| Age 9 and under | 194.3 | 208.0 | 180.3 | 180.4 | 192.9 | 167.3 |
| 10-19 | 150.7 | 156.4 | 144.8 | 135.8 | 141.7 | 129.6 |
| 20-29 | 153.3 | 123.6 | 182.5 | 140.3 | 110.1 | 170.1 |
| 30-39 | 203.7 | 172.6 | 233.4 | 186.6 | 159.8 | 212.7 |
| 40-49 | 274.8 | 260.6 | 288.5 | 253.6 | 237.4 | 269.2 |
| 50-59 | 409.5 | 394.8 | 423.6 | 378.4 | 356.2 | 399.7 |
| 60-69 | 569.2 | 559.5 | 578.3 | 535.5 | 522.5 | 547.7 |
| 70-79 | 707.6 | 691.6 | 721.2 | 667.3 | 659.1 | 674.2 |
| Age 80 and over (Regrouped) | 710.0 | 714.9 | 707.1 | 662.1 | 668.6 | 658.4 |
| Age 65 and over | 679.4 | 667.9 | 688.3 | 637.9 | 629.4 | 644.6 |
| Age 75 and over | 721.9 | 717.6 | 724.7 | 675.4 | 675.9 | 675.0 |

Note 1. Hospital inpatients are not included in the number of outpatients, but are included in the denominator which is the number of household members.
2. "Total" includes persons whose age is not stated.

Figure 25 Top 5 diseases in terms of ratio of outpatient visits, by sex (multiple responses)

[^2]
## 3. Worries and stress

Regarding the percentage distribution of persons aged 12 and over (excluding inpatients) by presence of worries or stress in daily life, $46.5 \%$ said "yes" and $42.6 \%$ said "no". (Figure 26)

In the breakdown of persons with worries or stress by sex, $42.4 \%$ of male and $50.3 \%$ of female said "yes", and in the breakdown by age-group, the group "aged 40 to 49 " was highest for both male and female. (Figure 27)

Figure 26 Percentage distribution by presence of worries or stress (aged 12 years and over)

Figure 27 Distribution of persons with worries or stress, by sex and age group (aged 12 years and over)

Note: Values do not include hospital inpatients.

Regarding the breakdown of the main causes of worries and stress by sex and age-group, "own studies, exams, entrance exams" was the most common response from male and female in the group "aged 12 to 19 ", there was a significant gender difference on the "own job" response for persons in their 30 s to 50 s , and "income, finances, debts, etc." was the most common response for male in the group "aged 50 to 59 " and female in the group "aged 40 to 49 ."
A significant gender difference was also seen for the responses "child care" and "child's education" particularly for persons in their 30 s and 40 s, with "child care" being the largest cause for female in the group "aged 30 to 39 " and "child's education" for female in the group "aged 40 to 49."
"Own illness or long-term care" was seen to increase with age-group for both male and female, and "illness or long-term care of a family member" increased with age-group for male and was most common for female in the group "aged 50 to 59 ".
"Relationship with family" was broadly flat for male, but tended to rise for female in their 40 s and 50 s. "Relationship with non-family members" was higher for female than for male, and was seen to decrease with age-group. (Figure 28)
Figure 28 Distribution of major causes of worries or stress, by sex and age group (multipleresponses) (aged 12 years and over)

2010

[^3]1. Values do not include hospital inpatients.
2. Top 3 majior causes of worries or stress by gender and age group are shown.

## 4. Mental state

Regarding the percentage distribution of persons aged 12 and over (excluding inpatients) by mental state points-group over the previous one month, the proportion with " 0 to 4 points" was highest, at $58.8 \%$. (Figure 29)
In the breakdown by gender and age-group, male outnumbered female in the " 0 to 4 points" categorty across all age-groups, while female outnumbered male in the " 5 to 9 points", " 10 to 14 points" and " 15 or more points" categories across all age-groups. (Table 19)

Figure 29 Perecentage distribution by mental state (points-group) (aged 12 years and over)

Note: Values do not include hospital inpatients.
Table 19 Perecentage distribution of mental state (points groupings), by sex and age group (aged 12 years and over)

Note: Values do not include hospital inpatients.

## 5. Attendance of health checkup and thorough medical checkup

Regarding attendance of health checkup and thorough medical checkup among persons aged 20 and over (excluding inpatients) over the previous one year, $64.3 \%$ had attended and $32.0 \%$ had not attended. The rate of attendance was the highest for the past 10 years. (Figure 30)

Looking at the breakdown of persons who attended a health checkup or thorough medical checkup by sex and age-group, the highest attendances were those in the group "aged 40 to 49 " among male, at $78.0 \%$, and the group "aged 50 to 59 " among female, at $66.3 \%$. (Figure 31)

Figure 30 Trends in health checkup or thorough medical checkup (aged 20 years and over)

Note: Values do not include hospital inpatients.
Figure 31 Distribution of persons who attended health checkup or thorough medical checkup, by sex and age group (aged 20 years and over)

Note: Values do not include hospital inpatients.

Regarding the breakdown of persons who did not attend a health checkup or thorough medical checkup by sex and reason for not attending, the response "I can attend a medical institution any time I feel worried about something" was the most common among male, at $30.4 \%$, followed by "I didn't have time" and "it's too much trouble." Among female, the response "I can attend a medical institution any time I feel worried about something" was the most common, with $34.2 \%$, followed by "I didn't have time" and "it's too expensive".

In the breakdown by age-group, the most common response for male in the group "aged 20 to 29 " was "it's too much trouble," for male from their 30 s to 50 s "I didn't have time," and for male in their 60 s or over "I can attend a medical institution any time I feel worried about something". The most common response for female in the group "aged 20 to 29 " was "it's too expensive", for female from their 30 s and 40 s "I didn't have time", and for female in their 50 s or over "I can attend a medical institution any time I feel worried about something". (Table 20)

Note: Values do not include hospital inpatients.

## 6. Attendance of cancer screening

Regarding persons aged 40 and over (20 and over in the case of uterine screenings, and excluding inpatients) who attended a cancer screening in the previous one year, the most common among male and female was "stomach cancer screening", with $34.3 \%$ for male and $26.3 \%$ for female.
Attendance of uterine and breast cancer screenings in the previous two years was $32.0 \%$ for uterine cancer screenings, and $31.4 \%$ for breast cancer screenings. (Figure 32)

Figure 32 Distribution of persons who attended cancer screening, by sex (multiple responses)

Note 1. Values do not include hospital inpatients.
2. Uterine cancer screening applies to women aged 20 or over, and other cancer screenings apply to persons aged 40 or over.

## IV Long-Term Care

## 1. Households with a person requiring long-term care

Regarding the breakdown of persons certified as requiring support or requiring long-term care under the Long-Term Care Insurance Act (hereinafter "persons requiring long-term care etc.") by structure of households in which they are resident, the most common structure was "nuclear family households", at $31.4 \%$, followed by "one-person households", at $26.1 \%$, and "three-generation households", at 22.5\%.

The annual trend shows an increase in the proportion of "one-person households" and a decrease in the proportion of "three-generation households". (Table 21, Figure 33)

Table 21 Trends in the percentage distribution of households with a person requiring long-term care etc., by structure of household
(Unit: \%)

| Year | Total | One-person <br> household | Nuclear <br> family <br> households | (Regrouped) <br> Households <br> with a couple <br> only | Three- <br> generation <br> households | other <br> households | (Regrouped) <br> Aged <br> households |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2001 | 100.0 | 15.7 | 29.3 | 18.3 | 32.5 | 22.4 | 35.3 |
| 2004 | 100.0 | 20.2 | 30.4 | 19.5 | 29.4 | 20.0 | 40.4 |
| 2007 | 100.0 | 24.0 | 32.7 | 20.2 | 23.2 | 20.1 | 45.7 |
| 2010 | 100.0 | 26.1 | 31.4 | 19.3 | 22.5 | 20.1 | 47.0 |

Figure 33 Trends in the percentage distribution of households with a person requiring long-term care etc., by structure of household

Regarding the breakdown of care requirement levels by structure of household, for "one-person households" the proportion with persons requiring lower level of care was high, and greater proportions of "nuclear family households" and "three-generation households" had persons requiring higher levels of care. (Table 22)

Table 22 Percentage distribution of long-term care requirement levels, by structure of households with a person requiring long-term care etc.

| 2010 |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Long-term care requirement level | Total | One-person households | Nuclear family households | (Regrouped) Households with a couple only | Threegeneration households | Other households | (Regrouped) <br> Aged Households |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Households with a person requiring support | 27.5 | 40.7 | 24.8 | 26.9 | 21.8 | 20.9 | 34.1 |
| Level 1 support | 12.1 | 19.0 | 11.0 | 11.3 | 8.2 | 8.8 | 15.6 |
| Level 2 support | 15.4 | 21.7 | 13.8 | 15.6 | 13.6 | 12.1 | 18.5 |
| Households with a person requiring long-term care | 69.5 | 55.6 | 71.3 | 69.5 | 76.4 | 77.0 | 62.3 |
| Level 1 long-term care | 17.2 | 18.0 | 15.6 | 17.2 | 17.6 | 18.4 | 17.5 |
| Level 2 long-term care | 19.3 | 17.9 | 18.5 | 19.0 | 22.1 | 19.1 | 18.4 |
| Level 3 long-term care | 15.3 | 9.1 | 16.3 | 14.5 | 17.4 | 19.5 | 11.7 |
| Level 4 long-term care | 10.3 | 6.9 | 12.2 | 12.2 | 10.9 | 10.9 | 9.3 |
| Level 5 long-term care | 7.4 | 3.8 | 8.6 | 6.6 | 8.5 | 9.1 | 5.4 |

[^4]
## 2. Persons requiring long-term care etc.

Regarding the breakdown of persons requiring long-term care by age-group, the largest was those "aged 80 to 84 ", at $23.9 \%$, followed by those "aged 85 to 89 ", at $22.8 \%$.

In the breakdown by sex, female outnumbered male by $67.2 \%$ to $32.8 \%$. (Table 23)
Table 23 Percentage distribution of persons requiring long-term care etc., by sex and age group

| (Unit: \%) age group 2010 |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sex | Total |  | Age 40-64 | 65-69 | 70-74 | 75-79 | 80-84 | 85-89 | Age 90 and over | (Regrouped) Age 65 and over |
| Total | [100.0] | 100.0 | 4.5 | 5.1 | 9.3 | 16.6 | 23.9 | 22.8 | 17.8 | 95.5 |
| Male | [32.8] | 100.0 | 6.5 | 7.4 | 14.5 | 19.4 | 23.7 | 15.9 | 12.5 | 93.5 |
| Female | [67.2] | 100.0 | 3.5 | 4.0 | 6.7 | 15.3 | 24.0 | 26.2 | 20.4 | 96.5 |

Note: "Total" includes cases where the long-term care level is not stated.

Regarding the breakdown of the main causes of long-term care requirements by care requirement levels, among persons requiring support the most common was "arthiritis", at $19.4 \%$, followed by "infirmity due to age", at $15.2 \%$. Among persons requiring long-term care, the most common was "cerebrovascular disease (stroke)", at $24.1 \%$, followed by "dementia", at $20.5 \%$. (Table 24)

Table 24 Percentage distribution of major causes of long-term care requirement, by long-term care requirement level

| Long-term care requirement level | Total | Cerebrovascular disease (stroke) | Dementia | Infirmity due to age | Arthritis | $\begin{aligned} & \text { Bone } \\ & \text { fracture } \\ & \text { or fall } \end{aligned}$ | Cardiac disease (hear t disease) | Parkinson's | Diabetes | $\begin{array}{\|c\|} \text { Respiratory } \\ \text { disorder } \end{array}$ | Mal ignant neoplasms (cancer) | Sight or hear ing impairment | Spinal injury | Others | Unknown | Not stated |

| Level 5 long-term care | 100.0 | 33.8 | 18.7 | 15.0 | 2.3 | 7.5 | 1.1 | 7.7 | 1.5 | 3.2 | 1.2 | - | 1.4 | 6.3 | 0.2 |  |

## 3. Principle carers

In the breakdown of relationships between principle carers and persons requiring long-term care etc., "co-resident" was the most common, at $64.1 \%$, followed by "institution", at $13.3 \%$, then "family member living elsewhere", at $9.8 \%$.

In the breakdown by relationship with the principle "co-resident" carer, the most common was "spouse", at $25.7 \%$, followed by "child", at $20.9 \%$, then "spouse of child", at $15.2 \%$. (Table 25, Figure 34)

Regarding the breakdown of principle "co-resident" carers by sex, female outnumbered male by $69.4 \%$ to $30.6 \%$. In the breakdown by age-group, the group "aged 60 to 69 " was largest for both female and male, with $31.3 \%$ and $24.7 \%$ respectively. (Figure 35)

Table 25 Trends in percentage distribution of principle carers, by relationship to person requiring long-term care etc.

| Year | Total | $\stackrel{\text { Co- }}{\text { resident }}$ | Spouse | Child | Spouse of child | Father and Mother | Other relatives | Family member living elsewhere | Institution | Others | Not stated |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2001 | 100.0 | 71.1 | 25.9 | 19.9 | 22.5 | 0.4 | 2.3 | 7.5 | 9.3 | 2.5 | 9.6 |
| 2004 | 100.0 | 66.1 | 24.7 | 18.8 | 20.3 | 0.6 | 1.7 | 8.7 | 13.6 | 6.0 | 5.6 |
| 2007 | 100.0 | 60.0 | 25.0 | 17.9 | 14.3 | 0.3 | 2.5 | 10.7 | 12.0 | 0.6 | 16.8 |
| 2010 | 100.0 | 64.1 | 25.7 | 20.9 | 15.2 | 0.3 | 2.0 | 9.8 | 13.3 | 0.7 | 12.1 |

Figure 34 Percentage distribution of principle carers, by relationship to person requiring long-term care etc.

Figure 35 Percentage distribution of co-resident principle carers, by sex and age group

Regarding the breakdown of co-resident principle carers and persons requiring long-term care by age-group, for persons requiring long-term care etc. "aged 70 to 79 " the largest carer age-group was "aged 70 to 79 ," at $42.6 \%$, and for persons requiring long-term care etc. "aged 80 to 89 " the largest proportion was persons "aged 50 to 59 ", at $37.4 \%$. (Table 26)

The annual trend shows an increasing number of combinations where both parties are aged 60 and over, 65 and over and 75 and over. (Figure 36)

Table 26 Percentage distribution of co-resident principle carers and person requiring long-term care etc., by sex and age group

Note: "Total" includes cases where the age of the person requiring long-term care etc. or the principle carer is not stated.

Figure 36 Trends in distribution of co-resident principle carers and persons requiringlong-term care etc., by age

Regarding the breakdown of care hours of co-resident principle carers by care requirement level, the most common response was "lending a hand when needed" for "level 1 support" through to "level 2 long-term care", and "almost all day" for "level 3 long-term care" and above. (Figure 37)

Figure 37 Percentage distribution of care hours of co-resident principle carers, by long-term care requirement level

Note: "Total" includes cases where the long-term care level is not stated.

In the breakdown by sex of co-resident principle carers who responded "almost all day", female outnumbered male by $72.8 \%$ to $27.2 \%$. In the breakdown by relationship to the person requiring long-term care, female "spouses" were the most common, at $36.8 \%$. (Figure 38)

Figure 38 Percentage distribution of co-resident principle carers caring "almost all day", by sex and relationship to persons requiring long term care etc.

## 4. Worries and stress among co-resident principle carers

$60.8 \%$ of co-resident principle carers said they do experience worries and stress in daily life, and $22.7 \%$ said they do not.

In the breakdown by sex, more female than male, by $63.7 \%$ to $54.2 \%$, experienced worries or stress. (Figure 39)

Figure 39 Percentage distribution of co-resident principle carers experiencing worries or stress, by sex

2010

Regarding the causes of worries and stress, the most common was "illness or long-term care of a family member" for both male and female, with $68.7 \%$ and $74.5 \%$ respectively. (Figure 40)

Looking at the breakdown of persons with worries or stress due to the "illness or long-term care of a family member" by sex and age-group, the proportion for co-resident principle carers was higher than for persons aged 12 and over overall, for both male and female. (Figure 41)

Figure 40 Distribution of causes of worries and stress in co-resident principle carers, by sex (multiple responses)

Figure 41 Distribution of persons with worries or stress who responded "Illness or long-term care of a family member," by sex and age group

## 5. Use of in-home services

Regarding the use of in-home services by persons requiring long-term care etc.during May, $77.9 \%$ had used at least one type of in-home service. In the breakdown by household structure, the highest proportion was "one-person households", at $84.0 \%$, followed by "nuclear family households", at 76.4\%, then "three-generation households", at $75.6 \%$.

In the breakdown by type of in-home service, for "one-person households" the most common was "home-visit services", at $69.1 \%$, and the proportion who had used a "home-delivered meal service" was higher than all other household structures at $13.4 \%$. Among "three-generation households" $56.7 \%$ had used "ambulatory long-term care services." (Table 27)

Regarding the breakdown of use of in-home services by persons requiring long-term care etc., $81.5 \%$ of "persons requiring long-term care" and $73.1 \%$ of "persons requiring support" had experience of use. (Figure 42)

Table 27 Distribution of use of in-home services, by structure of household (multiple responses)

| (Unit: \%) |  |  |  |  |  |  | 2010 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Experience of use <br> Type of in-home service | Total | One-person households | Nuclear fanily households | $\begin{array}{\|c\|c\|} \text { (Regrouped) } \\ \text { Households } \\ \text { with a } \\ \text { couple only } \end{array}$ |  | Other househol ds | (Regrouped) Aged households |
| Total | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |
| Used | 77.9 | 84.0 | 76.4 | 75.4 | 75.6 | 75.3 | 79.4 |
| Home-visit service | 51.9 | 69.1 | 53.7 | 53.5 | 40.4 | 40.5 | 59.6 |
| Ambulatory long-term care service | 46.2 | 30.3 | 46.7 | 44.1 | 56.7 | 53.5 | 37.5 |
| Short-term admission service | 11.7 | 4.7 | 9.2 | 8.4 | 17.7 | 17.8 | 7.9 |
| Multifunctional long-term care in a small group home | 2.7 | 5.7 | 0.9 | 1.1 | 2.2 | 2.4 | 3.7 |
| Home-del ivered meal service | 7.6 | 13.4 | 7.4 | 8.3 | 4.1 | 4.8 | 10.5 |
| Guide support service | 2.7 | 3.4 | 3.1 | 3.2 | 1.6 | 2.1 | 3.3 |
| Bedding wash, dry and disinfection service | 0.9 | 0.9 | 1.1 | 1.1 | 0.7 | 0.9 | 1.0 |
| Not used | 22.1 | 16.0 | 23.6 | 24.6 | 24.4 | 24.7 | 20.6 |

Figure 42 Percentage distribution of experience of in-home services

Regarding the reasons for non-use of home-visit services, ambulatory long-term care services, short-term stay services, and multifunctional long-term care in a small group home by persons requiring long-term care etc. during May, the most common response was "I manage with family care", given by $54.7 \%$ of persons requiring support and $52.1 \%$ of persons requiring long-term care, followed by "I manage by myself (the person requiring care)," given by $43.2 \%$ of persons requiring support and $18.0 \%$ of persons requiring long-term care. (Figure 43)

Figure 43 Distribution of reasons for non-use amongst persons who have not used home-visit, ambulatory or short-term admission services, or multifunctional long-term care in a small group home (multiple responses)

## 6. Mixed carer involvement

Regarding the type of long-term care received, as classified into 16 categories, by persons requiring long-term care etc. from family members, relatives and in-home care business operators, and breaking it down by carer involvement, the involvment of a "business operator only" was highest for "washing hair", at $63.4 \%$, followed by "bathing assistance", at $63.1 \%$, and "sponge bath", at 45.3\%.
The proportion of long-term care provided by "principle family carers only" was highest for all categories except for "washing hair", "bathing assistance" and "sponge bath".

The highest proportions of long-term care provided by "business operators and family carers" were $24.7 \%$ for "toilet assistance" and $19.6 \%$ for "changing body position or posture". (Figure 44)

Figure 44 Percentage distribution of mixed carer involvement, by type of care given

Note: "Others" means "the principle family carer and other family carers" or "other family carers only."

## Statistical Table

Table No. 1 Situation of households, of all households and by different types of household

Note: 1) "Average number of members with a job" means the average number of household members that have jobs
2) "Household expenditure" mean the household expenditure in May 2010 (including food and drink expenses (including eating-out and luxury food expenses), housing expenses, lighting and heating expenses, water expenses, clothing expenses, healthcare expenses, educational expenses, expenses for culture and leisure, social expenses, expenses for ceremonial occasions and other miscellaneous expenses), and does not include tax and social insurance premiums.

Table No. 2 Status of income, of all households and by different types of household

|  |  | All households | Aged households | Mother-child households | Households with children | Households with persons aged 65 and over |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Average income per one household (10,000 yen) |  | 549.6 | 307.9 | 262.6 | 697.3 | 489.8 |
| Average disposable income per household (10,000 yen) |  | 430.1 | 262.6 | 227.2 | 564.1 | 389.6 |
| Average income per one household member ( 10,000 yen) |  | 207.3 | 197.9 | 97.1 | 166.9 | 192.4 |
| Average earning income per one household member with job (10,000 yen) |  | 315.6 | 186.2 | 200.2 | 356.1 | 248.0 |

Notes 1. Hospital inpatients are not included in outpatient numbers, but are included in the denominator which is the number of household members.
2. "Total" includes perosons whose age isnot stated.

Table No. 12 Ratio of outpatients (per 1,000 population), by age (10 year groups), sex and diseases (multiple responses)

| Sex Diseases | Total | Age 9 and under | 10-19 | 20-29 | 30-39 | 40-49 | 50-59 | 60-69 | 70-79 | $\begin{gathered} \text { Age } 80 \text { and } \\ \text { over } \end{gathered}$ | (Regrouped) Age 65 and over | $\begin{gathered} \text { (Regrouped) } \\ \text { Age } 75 \text { and } \\ \text { over } \\ \hline \end{gathered}$ |

## Reference

Lorenz curve of annual household income distribution, for all households and for aged households

Trends in Gini coefficient of annual income amount, for all households and for aged households

| year | All households | Aged households |
| :--- | ---: | ---: |
| 1997 | 0.3954 | 0.4309 |
| 2000 | 0.3997 | 0.4159 |
| 2003 | 0.3882 | 0.3906 |
| 2006 | 0.3981 | 0.3989 |
| 2007 | 0.3949 | 0.3892 |
| 2008 | 0.4041 | 0.3806 |
| 2009 | 0.3950 | 0.3771 |

## What is the Lorenz curve?

Lorenz curve is a curve drawn by arranging the households in sequence in an ascending order of income amount, and plotting the cumulative percentage of the number of households on the horizontal axis and the cumulative percentage of the income amount on the vertical axis. If the income is perfectly equally distributed, the Lorenz curve becomes a straight 45 degree angle line from the origin (the perfect equality line). As the distribution of income becomes more unequal, the distance between the line of equality and the curve gets wide.

## What is the Gini coefficient?

The Gini coefficient shows the degree of concentration or inequality of the distribution. It represents the equality of distribution by the ratio of the area between the Lorenz curve and the line of perfect equality to the area of the triangle below the line of perfect equality. The Gini coefficient takes value between 0 and 1 , and the closer it gets to 0 , the more equal the distribution is, while the closer it gets to 1 , the more unequal the distribution is.

Note: The annual income amount means the total of earned income, public pension and onkyu pension, property income, employment insurance, child care allowance ,etc., other social security benefits, remittance, corporate pension and personal pension, etc., and other incomes.

## Explanation of Terms

1 "Household" is a group of people who live together in the same residence and share the same household income or a single person who independently maintains a residence or independently supports himself/herself.
2 "Householder" is the person declared by the household as the person who is the leader of the household and manages household matters, regardless of age and income.
3 "Household member" is each person comprising a household.
As of the date of the survey, a person who is temporarily absent from a household is considered as the household member. However, business bachelor, students studying abroad, residents of social welfare institution, etc. are excluded.
4 "Structure of household" is based on the following classifications.
(1) One-person household

It means a household with only one household member.
(2) Nuclear family household
a Household with a couple only
It means a household consisting of a householder and his/her spouse only.
b Households with a couple and unmarried children only
It means a household consisting of a husband, wife and their unmarried children only.
c Households with a single parent and unmarried children only
It means a household consisting of either a father or mother and their unmarried children only.
(3) Three-generation-family household

It means a household consisting of lineal three or more generations with the householder at the center.
(4) Other households

It means households other than those aforementioned in (1)-(3).
5 "Type of households" are based on the following classifications.
(1) Aged household

It means a household with persons aged 65 and over only, or a household with persons aged 65 and over and unmarried person aged under 18.
(2) Mother-child household

It means a household consisting of only a female aged less than 65 who is currently with no spouse (including a case where her spouse's life-or-death is unknown over a long time) due to her spouse's death, divorce or other reasons (including unmarried relationship) and her child (including adopted child) aged under 20.
(3) Father-child household

It means a household consisting of only a male aged less than 65 who is currently with no spouse (including a case where his spouse's life-or-death is unknown over a long time) due to his spouse's death, divorce or other reasons (including unmarried relationship) and his child (including adopted child) aged under 20.
(4) Other households

It means households other than those aforementioned in (1)-(3).
6 "Child" means an unmarried person under 18 years old.
7 "Type of family" are classified into the following categories.
(1) One-person household

Where only one person resides in the household.
(2) Households with a couple only

Where only a husband and wife reside in the household.
(3) Living with a child or children
(a) Living with a married child and the child's spouse
(b) Living with an unmarried child

Where living with an unmarried child, a child whose spouse is deceased or separated, or a child who is married but whose spouse does not live in the household.
(4) Living with other relatives

Where living with another relative, rather than with a child.
(5) Living with non-relatives

Where living with a person other than those in (1) through (4) above who is not a relative.
8 "With job" mean the person had a job with income in May 2010. However, even if the person did not engage in any work during the month, the following cases are deemed as "With job":
(1) When a person is an employee who received or was supposed to receive a salary or wage in May 2010 (for example, when the person was absent from work due to illness)
(2) When a person is self-employed and did not engage in work, but the business was operated in May 2010
(3) When a person is a family member of a self-employed person and was helping the family-managed business
(4) When a person was absent from work because of taking child care leave (long-term care leave) prescribed in the workplace's working regulations, etc.
9 "Regular employees or staff" are persons termed general staff, regular staff, etc.
10 "Non-regular employees or staff" are classified into the following categories.
(1) Part-time employees

Persons termed "part-timers", "side workers" or similar titles in their place of work, regardless of hours or number of days worked.
Where status as a "part-timer" or "side worker" is not clear, the term described or shown in the recruitment advertisement, description, or employment contract should be refered to.
(2) Dispatched workers from a dispatching establishment

Persons employed by a dispatching establishment under the Worker Dispatching Act, who are dispatched from there to work.
Persons who do not correspond to this Act should not be termed "dispatched workers from a dispatching place of business," even if the form of work is similar.
(3) Contract and comissioned staff

Contract staff are persons who are employed under a contract enabling them to practise a specialized occupation, or persons with a prescribed period of employment.
Comissioned staff are persons termed "comissioned staff" or similar titles in their place of work, regardless of working conditions or contracted period.
(4) Other

Persons other than those in (1) through (3) above.
11 "Median" is the value of the boundary that divides the income of all households arranged in sequence in an ascending order equally into two.
12 "Income quintile groups" : When income of all households are arranged in sequence in an ascending order equally into five, each group is called the first, second, third, fourth and fifth quintile group from the lower income household, and each boundary values are called the first, second, third, fourth quintile value (quintile boundary value).
13 "Income types" are classified as follows.
(1) Earned income

It means employee's income, business income, agricultural and livestock business income and industrial homework income.
a Employee's income
It means the total amount of salary, wages and bonuses paid to the household members by employers, including tax and social insurance premiums.

Payments in kind (such as securities and provision of meals) which are provided instead of salary payment are included by converting into values estimated at current price.
b Business income
It means the amount of income earned by the household members from business (excluding agricultural and livestock business), after subtracting purchasing costs and necessary expenses (excluding tax and social insurance premiums; hereafter the same applies).
c Agricultural and livestock business income
It means the amount of income earned by the household members from agricultural and livestock business, after subtracting purchasing costs and necessary expenses.
d Industrial homework income

It means the amount of income earned by the household members from industrial homework, after subtracting necessary expenses.
(2) Public pension and onkyu pension

It means the amount the household members received from each system of pension and onkyu pension (if a person receives pensions from two or more systems, it is the total amount of those pensions).
(3) Property income

It means income (including benefits in kind) obtained by renting land and houses that is owned by household members, after subtracting necessary expenses, and interests and dividends obtained from savings, public and corporate bonds, stocks, etc. (including separate withholding taxes), after subtracting necessary expenses.
(4) Social security benefits other than public pension

## a Employment insurance

It means the unemployment benefit under the Employment Insurance Act and the unemployment insurance payment under the Mariners Insurance Act, which are received by household members.
b child care allowance
It means child rearing allowances or special child rearing allowances received by household members.
c Other social security benefits
It means social security benefits (such as assistance under the Public Assistance Act) other than (2),(4)-a and (4)-b above, which are received by household members. However, benefits in kind are excluded.
(5) Remittance, corporate pension, personal pension and other income
a Remittance
It means the allowance periodically or continuously sent to household members.
b Corporate pension, personal pension, etc.
It means the amount of benefits paid as a pension to household members, subject to the payment of insurance premiums for a certain period of time.
c Other income
It mean incomes other than (1) to (4), (5) $-\mathrm{a}, \mathrm{b}$ above (i.e. temporary remittances, monetary gitts at weddings, funerals, and other events, etc.).
14 "Self-assessed living-conditions" is the answer chosen from alternatives of 5 classifications ("Very difficult", "Somewhat difficult", "Normal", "Somewhat comfortable" and "Very comfortable") on how the household feels about their overall living conditions at the time of the survey.
15 "Disposable income" is income after deduction of income tax, residence tax, social insurance premiums and fixed asset tax; "income" meaning income before tax, and "disposable income" meaning net income.
16 "Poverty rate" is calculated based on the OECD standard. "Adult" means persons aged 18 or over, and "child" means persons aged 17 or under. "Active household" means households where the householder is aged from 18 to 64 .

The "income" used in the calculation includes social security payments received as cash benefits, but does not include social security payments received as benefits in kind.
(1) Relative poverty rate

The proportion of household members under the poverty line. The poverty line is half of the median of the equivalent disposable income (household disposable income divided by the square root of the number of household members).
(2) Child poverty rate

The proportion of children aged 17 or under who are under the poverty line, as a proportion of all children aged 17 or under.
(3) Poverty rate of "active households with children"
(a) "One adult" poverty rate

The proportion of household members of active households "with one adult and children aged 17 or under" who are under the poverty line.
(b) "Two or more adults" poverty rate The proportion of household members of active households "with two or more adults and children aged 17 or under" who are under the poverty line.
17 "Inpatients" are persons who have been admitted to a hospital, clinic or an institution covered by long-term care
insurance.
18 "Complainants" are household members (excluding inpatients) with subjective symptoms such as illness or injury.
19 "Complainant ratio" is the number of complainants per thousand population. Hospital inpatients are not included in the numerator which is the number of complainants, but are included in the denominator which is the number of household members.
20 "Outpatients" are household members (excluding inpatients) attending hospitals or clinics, Japanese traditional massage, acupuncture, moxacautery, judo therapists, etc. due to illness or injury.
21 "Outpatient ratio" is the number of outpatients per thousand population. Hospital inpatients are not included in the numerator which is the number of outpatients, but are included in the denominator which is the number of household members
22 "Mental state" uses the K6 scale. K6 was developed in the USA by Kessler et al. to screen cases of mental illness such as depression, anxiety disorder, etc., and is widely used in surveys of the general public as an indicator of the seriousness of mental problems including psychological stress.

Points are allocated to the 6 questions, "have you felt nervous?" "have you felt hopeless?" "have you felt restless or fidgety?" "have you felt so depressed that nothing could cheer you up?" "have you felt that everything was an effort?" and "have you felt worthless?" on a 5 step scale (where "none of the time" is 0 points, "a little of the time" is 1 point, "some of the time" is 2 points, "most of the time" is 3 points, and "all of the time" is 4 points. The higher the total number of points, the more serious the mental problems may be.
23 "Persons requiring long-term care" are persons living at home, certified as requiring long-term care under the Long-Term Care Insurance Act (a. persons aged 65 or over who require long-term care, and b. persons aged 40 to 64 who require long-term care, and the physical or mental probem which is the cause of the long-term care requirement is a Specified Disease).
24 "Persons requiring support" are persons living at home, certified as requiring support under the Long-Term Care Insurance Act (a. persons aged 65 or over who are at risk of requiring long-term care, and b. persons aged 40 to 64 who are at risk of requiring long-term care, and the physical or mental probem which is the cause of the long-term care requirement risk is a Specified Disease).
25 "Care requirement level" is classified according to the "standard long-term care time" as prescribed in the "Ordinance on standards for examination and judgement of certification of needed long-term care by the certification committee of needed long-term care" (Ordinance of Ministry of Health, Labour and Welfare No. 32 of March 14, 2006).

Categories for standard long-term care times:
-Direct daily life support - long-term care for bathing, toilet, meals, etc.

- Indirect daily life support - assistance with housework such as laundry and cleaning
-Care relating to behavioural difficulties - dealing with an impulse to wander or unclean behaviour
-Functional training activities - functional training such as walking training or daily life training
- Medical care activities - assistance of treatment such as transfusion supervision, dealing with bedsores, etc.
(1) Level 1 support

A condition requiring from 25 to less than 32 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.

## (2) Level 2 support

A condition expected to require support that especially contributes to reducing or preventing the worsening of a condition requiring continuous daily care, over a continuous expected period of required support, and requiring from 32 to less than 50 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
(3) Level 1 long-term care

A condition requiring from 32 to less than 50 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
(4) Level 2 long-term care

A condition requiring from 50 to less than 70 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
(5) Level 3 long-term care

A condition requiring from 70 to less than 90 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
(6) Level 4 long-term care

A condition requiring from 90 to less than 110 minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
(7) Level 5 long-term care

A condition requiring 110 or more minutes of standard long-term care time in the above 5 areas, or an equivalent condition.
26 "In-home services" are classified into the following categories.
(1) In-Home Services
-Home-visit services
Care relating to bathing, toilet visits, meals, etc., and support for other daily life activities, provided by a home-visit care staff in the individual's home.
-Home-visit bathing service
Provision of a bathtub and care relating to bathing provided by visiting the individual's home.

- Home-visit nursing care

Recuperative care or necessary medical support provided by a nurse, etc. in the individual's home.
-Home-visit rehabilitation service
Physical and occupational therapy and other necessary rehabilitation to help independence in daily life provided by a physical therapist etc. in the individual's home.

- Home-visit care for preventive long-term care

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities provided by a certified careworker for the purpose of preventive care in the individual's home.
-Home-visit bathing service for preventive long-term care
Provision of a bathtub and care relating to bathing provided for the purpose of preventive care by visiting the individual's home.
-Home-visit nursing care for preventive long-term care
Recuperative care or necessary medical support provided by a nurse, etc. for the purpose of preventive care in the individual's home.
-Home-visit rehabilitation service for preventive long-term care
Physical and occupational therapy and other necessary rehabilitation provided by a physical therapist for the purpose of preventive care in the individual's home.

- Nighttime home-visit care

Periodic or on-call home-visit care during night hours.

## (2) Ambulatory Long-Term Care Services

- Daycare service

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities and functional training provided on an ambulatory basis in a daycare service center for the elderly.

- Ambulatory rehabilitation service

Physical and occupational therapy and other necessary rehabilitation to help independence in daily life provided on an ambulatory basis in a healthcare facility for the elderly requiring long-term care, hospital or clinic, etc.

- Daycare service for preventive long-term care

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities and functional training provided on an ambulatory basis in a daycare service center for the elderly for the purpose of preventive care.

- Ambulatory rehabilitation service for preventive long-term care

Physical and occupational therapy and other necessary rehabilitation provided on an ambulatory basis in a healthcare facility for the elderly requiring long-term care, hospital or clinic, etc. for the purpose of preventive care.

- Daycare for the elderly with dementia

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities, and functional training provided to dementia patients in need of long-term care on an ambulatory basis in a daycare service center for
the elderly.

- Daycare for preventive long-term care of the elderly with dementia

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities, and functional training provided to dementia patients in need of long-term care on an ambulatory basis in a daycare service center for the elderly for the purpose of preventive care.
(3) Short-Term Stay Services

- Short-term stay for long-term care

Care relating to bathing, toilet visits, meals, etc., support for other daily life activities, and functional training provided via short-term stay to an intensive care home for the elderly or a short-term stay facility for the elderly.

- Short-term stay for recuperation care

Nursing, long-term care and functional training under medical management, and other necessary medical care and support for daily activities provided via short-term stay to a long-term care health facility or a sanatorium-type medical care facility for the elderly requiring long-term care.

- Short-term stay for preventive long-term care

Care relating to bathing, toilet visits, meals, etc., support for other daily activities, and functional training provided via short-term stay to an intensive care home for the elderly or a short-term stay facility for the elderly for the purpose of preventive care.

- Short-term stay for preventive recuperative care

Nursing, long-term care and functional training under medical management, and other necessary medical care and support for daily life activities provided via short-term stay to a long-term care health facility or a sanatorium-type medical care facility for the elderly requiring long-term care for the purpose of preventive care.
(4) Multifunctional Care in a Small Group Home Setting

- Multifunctional care in a small group home setting

A service providing "home-visit", "ambulatory" and "stay-over" services in one location.
-Multifunctional preventive long-term care in a small group home setting
A service providing "home-visit", "ambulatory" and "stay-over" services in one location for the purpose of preventive care.
(5) Home-Delivered Meal Service

A service providing nutritionally balanced meals through regular home visits for elderly persons who have difficulties cooking.
(6) Guide Support Service

A community or user home-based welfare service using vehicles to provide transport between locations supplying preventive care and daily life activity support services, medical institutions, etc., and to provide locations for mobility support in shopping centers, etc., and to offer various information, as well as the leasing of electric scooters and wheelchairs.
(7) Bedding Washing, Drying and Disinfection Service

A service providing washing, drying and disinfection for bedding hygiene management.

[^0]:    Note: Values do not include households in which "Mother's job status is not stated".

[^1]:    Note: Values do not include persons whose "Called title at workplace is not stated".

[^2]:    Note: Hospital inpatients are not included in the number of outpatients, but are included in the denominator which is the number of household members.

[^3]:    Note 1. Values do not include hospital inpatients.

[^4]:    Note 1. "Total" includes cases where the long-term care level is not stated.
    2. Where a household has multiple persons requiring long-term care, the household is counted as a household with the person with the highest level of requirement
