

Vital Statistics: Occupational and Industrial Aspects

1 Purpose of survey

Vital Statistics: Occupational and Industrial Aspects has been carried out with the objective to obtain basic data for health, labour and welfare policies, by demonstrating the relationship between Vital Statistics concerning live births, deaths, fetal deaths, marriages and divorces, and occupation and industry.

2 Object, items of survey and count range

Category	Object range	Items	Count range
Births	Whole numbers of cases that were registered pursuant to the provisions of the Family Registration Act and the Regulations Regarding Notification of Fetal Deaths	Parents' occupations at the child's birth	Except mothers aged below 15
Deaths		The deceased's occupation and industry at death	Except persons aged below 15 However, in the aggregate for early neonatal deaths, early neonatal deaths are the object.
Fetal deaths		Parents' occupation at the time of fetal death	Except mothers aged below 15
Marriages		Occupation of bride and groom before they live together	Japanese in Japan
Divorces		Occupation of wife and husband before they separate	

It is currently prepared every five years to coincide with the census year.

3 Term of survey

The survey was conducted for cases that occurred during the period from April 1, 2020 to March 31, 2021 and were registered within the given time.

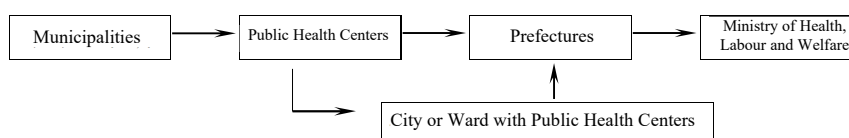

4 Method of survey

The applicable classification numbers of occupation or industry that was notified were filled in the survey form when it was registered at the municipality.

5 Occupation and industry

Occupation and industry are in accordance with the standards of statistics: "Japan Standard Occupational Classification" and "Japan Standard Industrial Classification". (Refer to " 9 Explanation of Terms (3) ")

6 Report route of survey

7 Tabulation of results

Tabulation was conducted by the Director-General for Statistics, Information System Management and Industrial Relations.

8 Instructions

(1) Symbols used in the tables

—	Magnitude zero
...	Data not available, or the indication of data is not appropriate
•	Category not applicable
0.0	Figure less than 0.05

(2) Statistical figures may not add up to the "totals" due to rounding.

(3) "Standardized" and "age-adjusted" in standardized live birth rates, age-adjusted death rates, standardized marriage rate and standardized divorce rates are a way of making fairer comparisons between groups of different age distributions, for the ratio of the number of events occurred during the period of survey divided by the population. (For the specific method of calculation, please refer to " 9 Explanation of Terms (2) ").
