

## **Press Release**

Press Release (This is provisional translation. Please refer to the original text written in Japanese.)

March 28, 2011 Water Supply Division, Health Service Bureau

To Press and those whom may concern,

Detection of radioactive materials in tap water (13<sup>th</sup> announcement)
--Fukushima Prefecture and Chiba Prefecture--

Today, we obtained the results of radioactive materials survey conducted by the Government's Nuclear Emergency Response Headquarters and the Chiba Prefectural Waterworks Bureau on tap water.

#### 1. The results of the survey (Attachments 1 and 2)

The results of the survey conducted from 26 to 27 March by the Government's Nuclear Emergency Response Headquarters and the Chiba Prefectural Waterworks Bureau on radioactive materials in tap water are shown in the attachments 1 and 2. The Ministry of Health, Labour, and Welfare (MHLW) will continue to obtain data on tap water and take appropriate measures based on it.

Please note that the possibility that the health risk posed by the short period of tap water intake exceeding the index values is extremely low. It is not intended to restrict drinking water (including infants' ingestion of tap water) in case you have no access to alternative drinking water. You can use the tap water for washing hands and bathing at home without any concern.

(Reference 1) The implementation status of public relations that water supply utilities have informed residents to refrain from drinking tap water or refrain from having infants intake tap water (Attachment 3)

(Reference 2)

Index values for restrictions on the intake of food and beverages set out by the Nuclear Safety Commission:

Radioactive iodine in drinking water: 300 Bq (Becquerel)/kg; Radioactive cesium in drinking water: 200 Bq (Becquerel)/kg

(Note) The concept of the "Index values for restrictions on the intake of food and beverages"

The index values were established by the Nuclear Safety Commission by foodstuff category (drinking water, food, etc.), taking into account such factors as the amount of Japanese foodstuff intake, based on the

radiation protection standards recommended by the International Committee on Radiological Protection (ICRP) (Thyroid gland equivalent dose of radioactive iodine is 50 millisieverts (mSv)/year).

(Reference 3) "Measures to be taken against water supply associated with the accident in the Fukushima

No.1 and No.2 nuclear power plants" (No. 1-0319 issued by Water Supply Division, Health Service Bureau,

MHLW on March 19, 2011)

OMeasures to be taken against tap water in case radiation measured in the tap water exceeds in connection

with the nuclear power plant accident: Water Supply Division, Health Service Bureau notified heads of

departments in charge of water supply administration in each prefecture and water supply utilities:

1) To refrain from drinking tap water exceeding the index values;

2) That you can use the tap water for domestic use without any concern;

3) That it is not intended to restrict drinking tap water in case you have no access to alternative drinking

water; and such.

(Reference 4) "Measures for infants' ingestion of tap water" (No. 1-0321 issued by Water Supply Division,

Health Service Bureau, MHLW on March 21, 2011)

oMHLW notified heads of departments in charge of water supply administration in each prefecture and

water supply utilities, in case the level of radioactive iodine in tap water exceeds 100 Bq/kg, to refrain from

giving infants formula milk dissolved by tap water, having them intake tap water, and so on.

(Reference 5)

Infants here mean babies who take breast feeding or formula milk.

Attachment 1: Omitted

Attachment 2: Omitted

Attachment 3-1: Timeline (The implementation status of public relations)

Attachment 3-2: By prefecture (The implementation status of public relations)
