Information about CT Scan

A CT scan is performed to take images of cross-sections of the entire body using an X-ray. You must be lying down when the images are taken. You may be asked to hold your breath. Please follow the technician's instructions as carefully as possible.

1. Influence of radiation

It is thought that the radiation used in a normal scan has almost no influence on your body. If you are concerned, please discuss this with your doctor.

If you have a cardiac pacemaker implanted, please be sure to bring your "Pacemaker Identification Book" with you on the day of the CT scan.

If you are or may be pregnant, please tell your doctor or staff before the scan.
