Update 3 in relation to the COVID-19

A set of additional categories has been agreed to be able to document or flag conditions that occur in the context of COVID-19.

Both, 3 character and 4 character codes have been defined to respond to the different levels of coding depth that is in place in different countries. It is further noted that technological constraints may require to bridge national coding to the international codes until an update of the relevant IT systems allows to use the international codes directly.

U08 Personal history of COVID-19

U08.9 Personal history of COVID-19, unspecified

Note: This optional code is used to record an earlier episode of COVID-19, confirmed or probable that influences the person's health status, and the person no longer suffers of COVID-19. This code should not be used for primary mortality tabulation.

U09 Post COVID-19 condition

U09.9 Post COVID-19 condition, unspecified

Note: This optional code serves to allow the establishment of a link with COVID-19. This code is not to be used in cases that still are presenting COVID-19.
