

The diagram illustrates the timing of two childhood illnesses relative to birth. A horizontal axis represents age in months, with major tick marks at 1, 2, 3, 4, 5, 6, 7, 8, and 9 years. Two red double-headed arrows indicate the duration of each illness. The top arrow, labeled '麻疹' (Measles), spans from approximately 12 to 90 months. The bottom arrow, labeled '風疹' (German Measles), also spans from approximately 12 to 90 months, overlapping the upper arrow's range.

- 1) 幼稚園と小学校入学時は定期接種で無料。
中学校入学時は定期接種ではないが、少しでも勧奨をしよう
 - 2) 1歳のお誕生日にMRワクチンをキャンペーン

麻疹の「既接種者+既感染者」の率

(寺田ら, 日本小児科学会雑誌 112:458, 2008)
