

Attention Travelers to
Africa, Central and South America, Asia-Pacific region

Zika Virus disease transmission persists

**Beware of
mosquitoes
on your travels!**

Mosquito bites cause infections

Prevent mosquito bites on your travels by wearing long sleeves and pants, and regularly applying bug repellent.

Pregnant women and women planning pregnancy should beware

We recommend that you do not travel to areas where transmission of Zika virus is known to occur; if you become infected, your fetus may develop birth defects such as microcephaly.

The disease may be transmitted through sexual contact

Regardless if there are clinical symptoms or not, please use a condom if you engage in sex, or refrain from sex altogether when traveling.
