If the weight of the contents of one sample is less than 150 g , the contents of other containers are added to make one sample of 150 g . | $\begin{aligned} & 1 \\ & 1 \\ & 2 \\ & 3 \end{aligned}$ |

${ }^{*}$ 1: Seafood (squilla) shall be regarded as 1.
*2: Excluding those finely chopped, such as julienned or shredded.
*3: F or diarrhetic shellfish poison of shellfish such as freshwater clam, when weight is less than 10 g as shelled, 0.25 is applied.
*4: F or Patulin, use methods (ii) or (iii).

* F or collecting specimens of products in bulk cargo such as grains, beans, follow the procedures below
A. Specimen collection upon loading onto a silo or a barge (hereinafter referred to as silo, etc.)

When loading onto a silo, select a single arbitrary silo, etc. as one lot. Use means such as autosamplers to collect specimens that are representative of the entire lot.
Collect a total of 10 kg or more of the specimen in 15 collections over appropriate intervals, and divide them up to obtain 1 specimen (of 1 kg or more).
B. Specimen collection on a barge

Collect a total of 10 kg or more of the specimen from a total of 15 positions in the upper, middle and lower parts of an arbitrary barge.
Then mix all specimens together and divide them up to obtain 1 specimen ( 1 kg or more).
C. Specimen collection from a container

Collect a total of 10 kg or more of the specimen from a total of 15 positions in the upper, middle and lower parts of an arbitrary container.
Then mix all specimens together and divide them up to obtain 1 specimen ( 1 kg or more)
