

“Plastering and interior finishing work”

The important points for Safety and health

Precautions when working on machines, tools, etc.

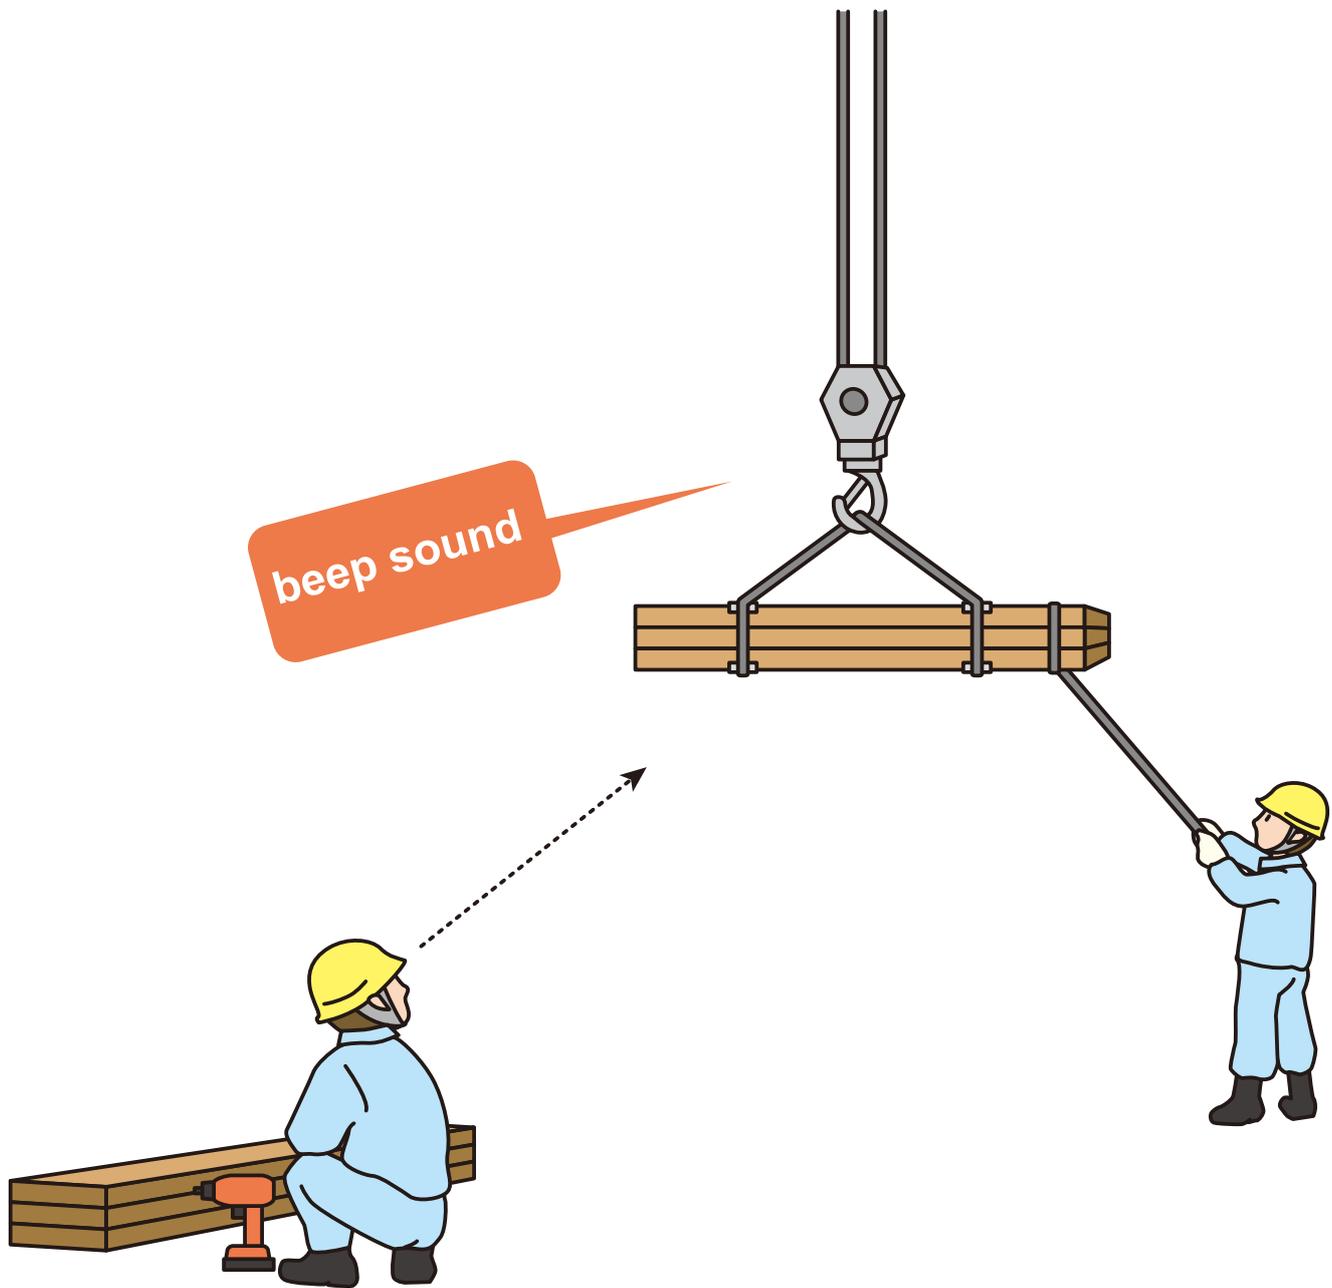

(1) Operation licenses for mobile cranes

- A mobile crane can only be operated by a qualified person!
- When working with a mobile crane, make sure the operators are qualified for the lifting loads of cranes.

	License	Skill training course	Special education
Operation of mobile cranes with the lifting loads is 5 tons or more	○		
Operation of mobile cranes with the lifting loads is 1 ton or more, or less than 5 ton	○	○	
Operation of mobile cranes the lifting loads is less than 1 ton	○	○	○

(2) Never enter under a suspended load in a crane work!

Matters to follow

1. If a material passes overhead, stop working and check the position of the material.
2. Make sure to clear out people under a load using voice calls, whistles, sirens, etc.
3. Set up an off-limits area, and thoroughly prohibit people entering under a load.

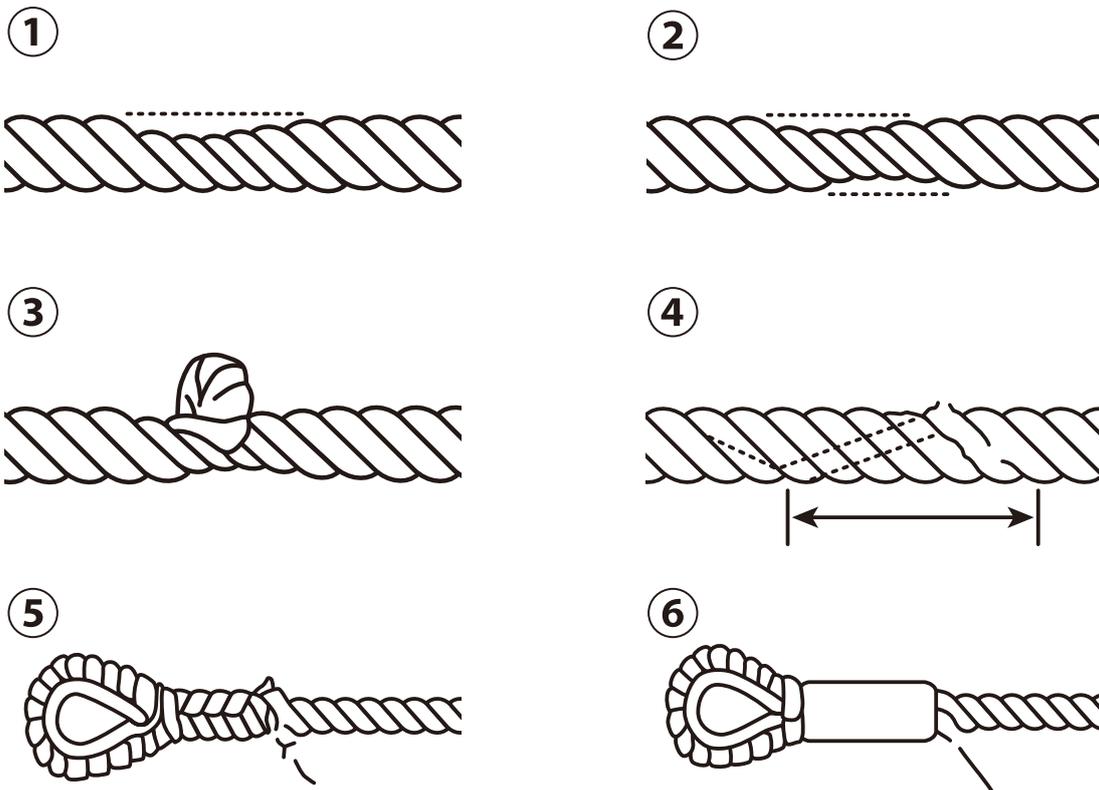

(3) Slinging work is performed by qualified personnel

Matters to follow

1. In principle, a slinging work is performed by a person who has completed the skill training course for slinging operation.
2. Be sure to carry a license certificate (certificate) during slinging works.

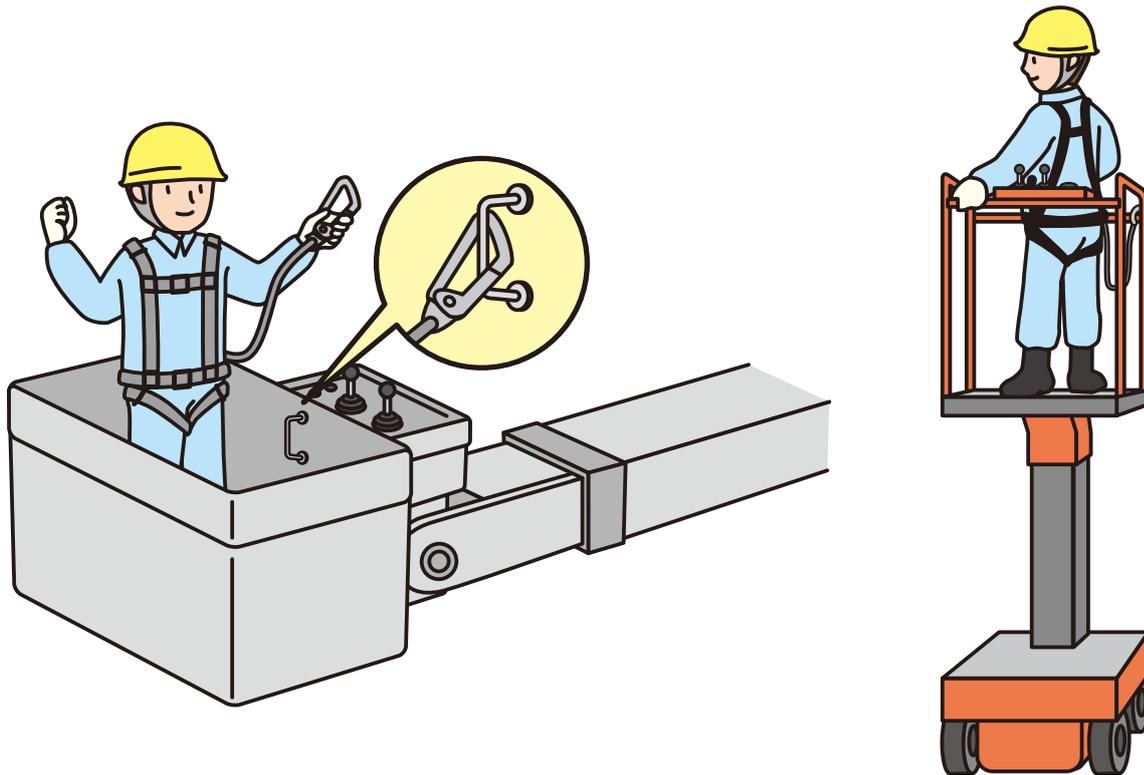

(4) Prohibition of using such wire ropes

The following wire ropes are prohibited.

1. Strikingly crushed ropes.
2. The diameter has decreased by more than 7% of the nominal diameter.
3. Those with a kinking.
4. 10% or more of the strands are broken within one twisting.
5. A rope that the eye splice braid part is loosened.
6. Damaged wire rope at the base of the steel ferrule.

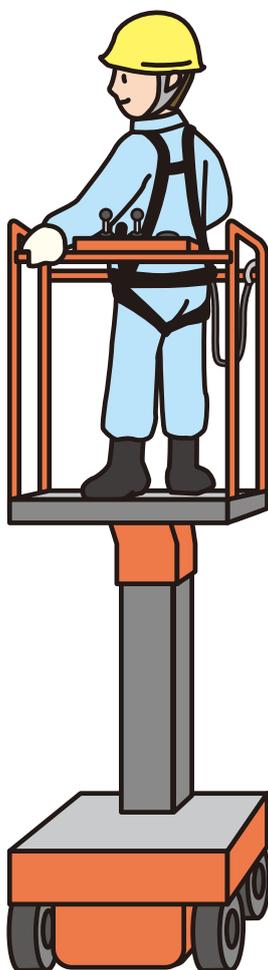

(5) Precautions when using an aerial work vehicle

Matters to follow

1. Check steps on a floor, and lower a work platform to the lowest position when traveling.
2. Use the personal fall arrest systems (fall prevention harness).

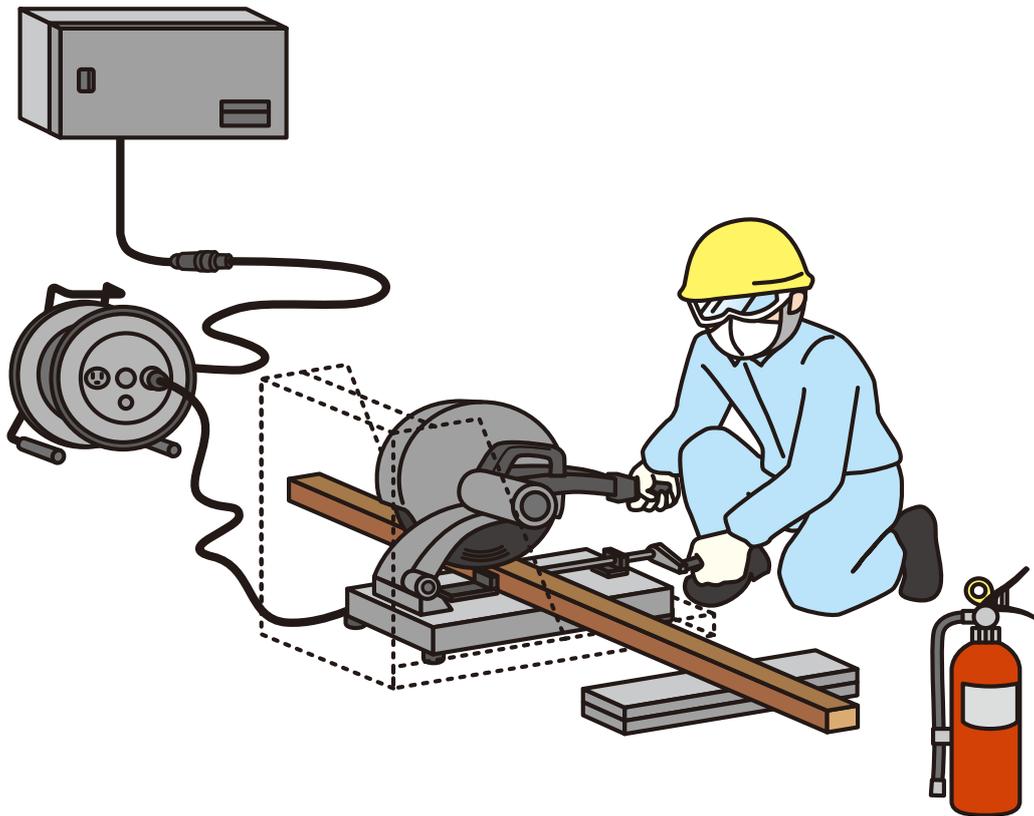

(6) Do not work in an unreasonable posture when using an aerial work vehicle!

Matters to follow

1. Do not work with unnatural posture when using an aerial work vehicle.
2. Check the position of a control lever carefully, and be careful not to touch it during the work.

(7) Trial run of a grinding wheel and the special education

Matters to follow

1. Replacement of grinding wheels and a trial run at the time of replacement are performed by a person who has received the safety and health special education.
2. Be sure to conduct a test run of a grinding wheel.
 - i One minute or more before starting the work
 - ii Three minutes or more when grinding wheels were changed
3. Make sure that the “maximum allowable speed” and “dimensions” displayed on a grindstone match the machine.
4. Cotton work gloves are prohibited.

(8) Wear a protective gear when using a disc grinder!

Matters to follow

1. Use eye protectors.
2. For dusty works, use a dust mask.
3. Wear ear protection devices such as earplugs when working in a noisy environment.
