[Notes]

(1) Symbols used in the tables

Quantity zero	—
Item/Category not applicable	•
Data not available or applicable	...
Less than a half of the unit	0,0.0
Decreased number (or percentage)	Δ

(2) As numbers in the Summary Report are rounded, the sum of breakdown may not agree with the total. In addition, increases and decreases in numbers and percentages are calculated based on released data.

(3) Regarding "household"-related items, data on yearly trends before 1985 are based on "Comprehensive Survey of Living Conditions (Statics and Information Department, Minister's Secretariat, Ministry of Health, Labour and Welfare)".

(4) Data of 1995 exclude Hyogo Prefecture, as the survey was not carried out in this area due to the Great Hanshin-Awaji Earthquake.

(5) Data of 2011 exclude Iwate, Miyagi and Fukushima prefectures, as the survey was not carried out in these areas due to the Great East Japan Earthquake.

(6) Data of 2012 exclude Fukushima Prefecture, as the survey was not carried out in this area due to the Great East Japan Earthquake.

(7) Data of 2016 exclude Kumamoto Prefecture, as the survey was not carried out in this area due to the Kumamoto Earthquake.

Outline of Survey

1 Objective

The purpose of this survey is to research into the fundamental aspects of the nation's livelihood such as health, medical care, welfare, pension and income, and thereby to provide data instrumental for the planning and operation of the health, labour and welfare administration. The survey was initiated in 1986. Every three years a large-scale survey is conducted and in each of the interim years a smaller-scale survey is carried out.

In the year 2019, the 12th large-scale survey was carried out.

2 Scope of Survey and Households Surveyed

The survey covers households and household members nationwide. Respondents sourced for the Household Questionnaire Survey and the Health Questionnaire Survey were all households (around 300,000 households) and their household members (around 720,000 persons) in 5,530 areas that were selected using the stratified random sampling method out of areas in the category of Type 1 and Type 8 among census enumeration districts for the 2015 National Census; for the Long-Term Care Questionnaire Survey, persons requiring long-term care or support (around 7,000 persons) as defined under the Long-Term Care Insurance Act in 2,500 areas selected using the stratified random sampling method out of the above-mentioned 5,530 areas; for the Income Questionnaire Survey and the Savings Questionnaire Survey, all households (about 30,000 households) and their members (about 80,000 persons) in 2,000 subareas selected with the stratified random sampling method out of subareas of Type 1 category that are defined in the above-mentioned 5,530 areas.

However, following persons were excluded from the scope of the survey:

a. Household/Health/Long-Term Care Questionnaire Survey

Persons living apart from other household members as mentioned below:

Business bachelors, migrant workers, persons on an extended business trips (roughly 3 months or longer), persons studying abroad, persons living in a social welfare institution, long-term inpatients (whose resident registrations has been moved to the hospital), boarded out foster child, prisoners and others living apart from other household members;

b. Income/Savings Questionnaire Survey

Persons living apart as mentioned in the preceding paragraph "Household Questionnaire Survey", households and household members who have moved in or out of the covered areas on and after the date of the Household Questionnaire Survey and one-person households living in a dormitory or a boarding house.

Notes: 1 "Type" numbers are for indicating the categories of census enumeration districts. "Type 1" is an ordinary enumeration area and "Type 8" is an area in which are located dormitories/boarding houses having about 50 or more one-person households living therein.

2 "Subarea" means a geographical subarea resulting from the division of one census enumeration area into several smaller areas for the purposes of better accuracy of statistics and equalization of burdens of census enumerators.

3 Date of Survey

Household/Health/Long-Term Care Questionnaire Survey June 6, 2019 (Thursday)
Income/Savings Questionnaire Survey July 11, 2019 (Thursday)

4 Survey Items

Household Questionnaire Survey:	Status of one-person households, total household expenditures in May, relationship with householder, gender, year and month of birth, marriage status, status of participation in medical insurance, status of receipt of public pension/Onkyu annuity, status of participation in public pension system, labour force status, etc.
Health Questionnaire Survey:	Subjective symptoms, outpatients, health problems in daily life, subjective health assessment, worries and stress, mental state, receiving rate of health checkups, etc.
Long-Term Care Questionnaire Survey:	Gender and dates of birth of persons requiring long-term care, care requirement levels, causes for long-term care, use of nursing care services, hours spent for care by major caregivers, involvement of family member caregivers and care service providers.
Income Questionnaire Survey:	Amounts of income by income type, relevant taxes, etc. for the previous year, self-assessed living conditions, etc.
Savings Questionnaire Survey:	Current balance of savings and debts, etc.

5 Survey method

Household members filled out a questionnaire distributed by census enumerators in advance, and then the enumerators collected the filled-out questionnaires. In addition, Savings Questionnaire Survey were collected after sealed up, while Health Questionnaire Survey and Income Questionnaire Survey were collected after sealed only in cases where it was absolutely necessary to do so.

However, questionnaires were collected by mail only for households that could not be interviewed, even if census enumerators visited them repeatedly due to reasons, such as being out.

6 Route of the Survey

a. Household/Health/Long-Term Care Questionnaire Survey

b. Income/Savings Questionnaire Survey

*Only for households that could not be interviewed, even if census enumerators visited them repeatedly due to reasons, such as being out.

7 Tabulation of Survey Results and Households Tabulated

The survey results were tabulated by the Director-General for Statistics, Information Policy and Policy Evaluation, Ministry of Health, Labour and Welfare.

The number of households surveyed, the number of responding households, and the number of households tabulated are as follows:

	The number of households surveyed	The number of responding households	The number of households tabulated (except for those ineligible for tabulation)
Household/Health Questionnaire Survey	301,334 households	218,332 households	217,179 households
Income/Savings Questionnaire Survey	32,529 households	23,014 households	22,288 households
Long-Term Care Questionnaire Survey	7,396 persons	6,549 persons	6,295 persons

* The Comprehensive Survey of Living Conditions is a statistical survey for formulating the "Statistics for Comprehensive Statistics of Living Conditions", fundamental statistics under the Statistics Act (Act No. 53 of 2007).

Outline of Results

I The number of households and household members

1 Household structures and household types

The total number of households in Japan as of June 6, 2019 is 51,785,000.

As for household structures, "one-person household" is the most common, totaling 14,907,000 (28.8% of all the households), followed by 14,718,000 of "household of a couple and unmarried child(ren) only" (28.4%), and then by "household of a couple only" totaling 12,639,000 (24.4%).

In terms of household type, there is 14,878,000 of "aged household" (28.7% of all households). (Table 1, Figure 1)

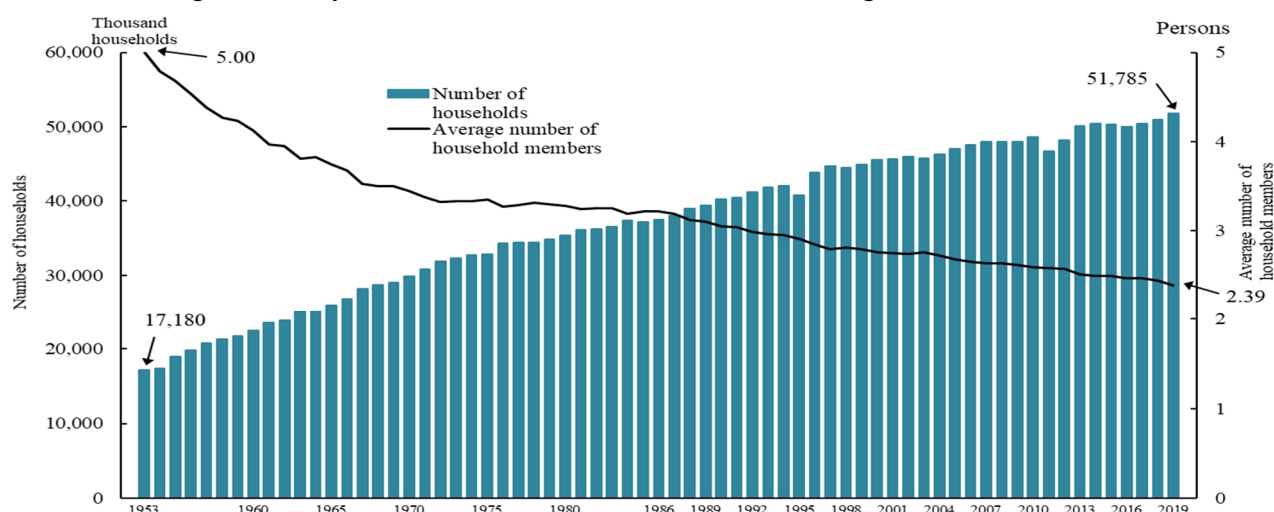

Table 1 Yearly trends in the number of households and average number of household members by household structures and household types

	Total	Household structures						Household types				Average number of household members
		One-person household	Household of a couple only	Household of a couple and unmarried child(ren) only	Household of a single parent and unmarried child(ren)	Three-generation-family household	Other households	Aged household	Mother-child(ren) household	Father-child(ren) household	Other households

2 Households with person(s) aged 65 and over

The total number of households with person(s) aged 65 and over is 25,584,000 (49.4% of all households). Looking at household structures, "household of a couple only" is the most common, totaling 8,270,000 households (32.3% of all the households with person(s) aged 65 and over), followed by 7,369,000 households of "one-person household" (28.8%) and then by 5,118,000 households of "household of parent(s) and unmarried child(ren) only" (20.0%). (Table 2, Figure 2)

Table 2 Yearly trends in household structures of households with person(s) aged 65 and over

	Households with person(s) aged 65 and over	As a percentage for all households (%)	One-person household	Household of a couple only	Household of parent(s) and unmarried child(ren) only	Three-generation-family household	Other households	(Regrouped) Household of person(s) aged 65 and over only

Notes: 1) Figures for 1995 do not include data for Hyogo Prefecture.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

3) "Household of parent(s) and unmarried child(ren) only" includes "household of a couple and unmarried child(ren) only" and "household of a single parent and unmarried child(ren)".

Figure 2 Yearly trends in household structures of households with person(s) aged 65 and over

Notes: 1) Figures for 1995 do not include data for Hyogo Prefecture.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

3) "Household of parent(s) and unmarried child(ren) only" includes "household of a couple and unmarried child(ren) only" and "household of a single parent and unmarried child(ren)".

Looking at household structures of the households with person(s) aged 65 and over, "one-person household" reach 7,369,000 households (49.5% of all the aged households), and "household of a couple only" reach 6,938,000 households (46.6%). (Table 3, Figure 3)

Looking at "one-person household", males account for 35.0%, whereas females account for 65.0%.

Looking at their age groups by gender, the male population aged 65 to 69 and the female population aged 75 to 79 account for the largest percentage, respectively at 30.9% and 22.2%. (Figure 4)

Notes: 1) Figures for 1995 do not include data for Hyogo Prefecture.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

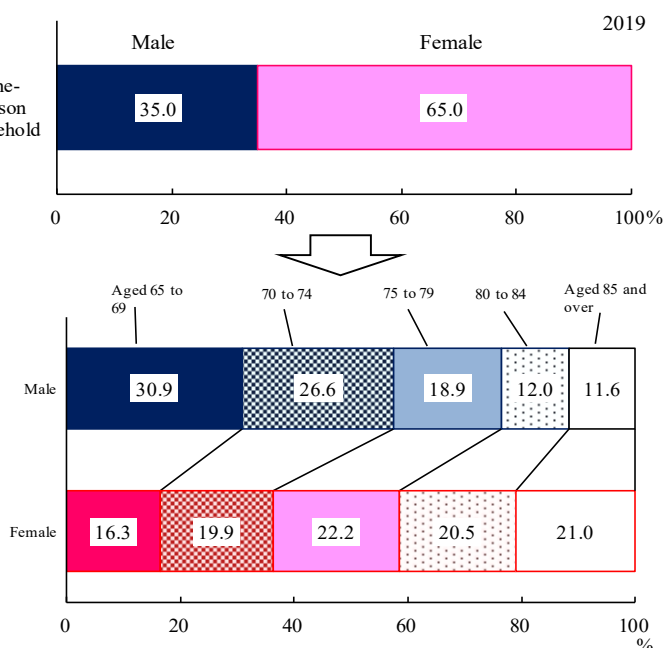

3) "Other households" include "household of parent(s) and unmarried child(ren) only" and "three-generation-family household".

Figure 3 Household structures of aged household

Note: "Other households" include "household of parent(s) and unmarried child(ren) only" and "Three-generation-family household".

Figure 4 Gender and age structures of one-person household with a person aged 65 and over

3 Persons aged 65 and over

The total number of households with person(s) aged 65 and over is 37,631,000.

In terms of family type, persons of "household of a couple only" (both or either of the couple aged 65 and over) is the most common, totaling 15,208,000 (40.4% of all the persons aged 65 and over), followed by 13,527,000 of "coresident with child(ren)" (35.9%), and then by 7,369,000 of "one-person household" (19.6%). (Table 4)

Table 4 Yearly trends in family types of persons aged 65 and over

	Persons aged 65 and over	One-person household	Household of a couple only	Coresident with child(ren)	Coresident with married child(ren) and the child's spouse	Coresident with child(ren) without spouse	Coresident with other relative(s)	Coresident with person(s) other than relative(s)

Notes: 1) Figures for 1995 do not include data for Hyogo Prefecture.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

By gender and age group, the percentage of males "coresident with married child(ren) and child's spouse" increases, as the age rises, whereas the percentage of females of "one-person household" and "coresident with married child(ren) and child's spouse" also increases. (Figure 5)

Figure 5 Family types of persons aged 65 and over by gender and age group

Note: "Others" include "coresident with other relative(s)" and "coresident with person(s) other than relative".

4 Households with child(ren)

The number of households with child(ren) is 11,221,000 (21.7% of all households). The number of households with only "one" child is 5,250,000 (10.1% of all households, or 46.8% of households with child(ren)), while the number of households with "two" children is 4,523,000 (8.7% of all households, or 40.3% of households with child(ren)).

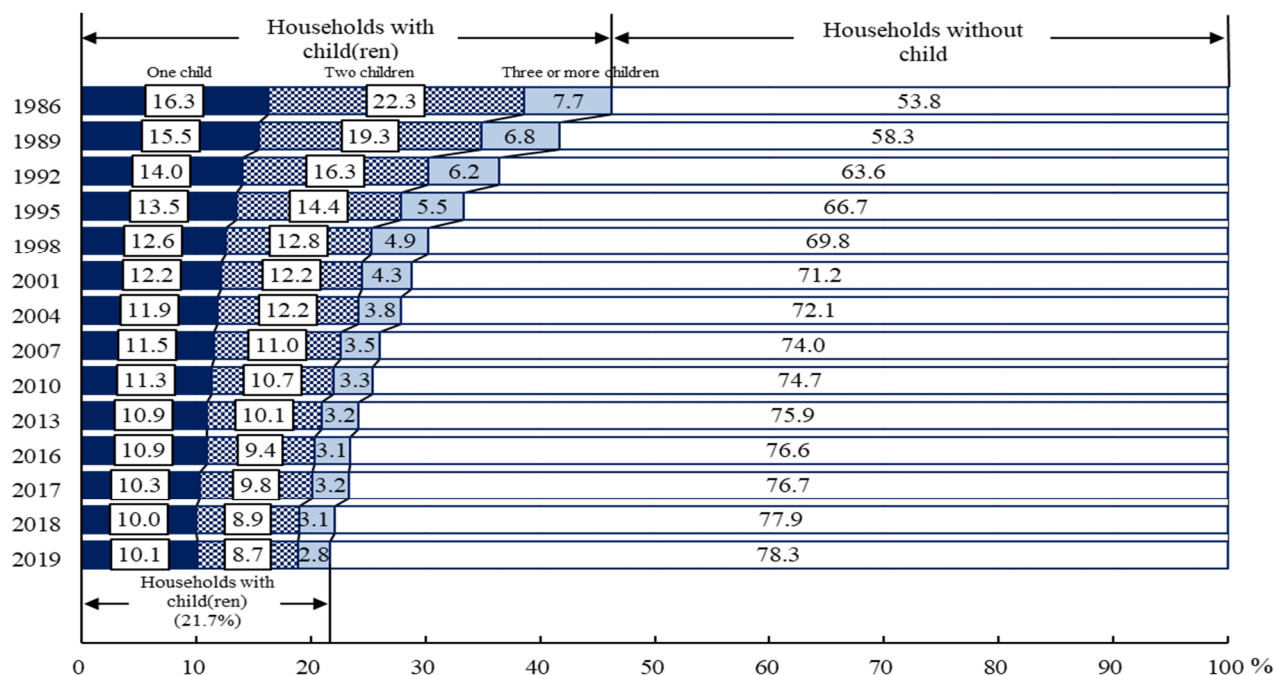

Looking at household structures, "household of a couple and unmarried child(ren) only" is the most common structure, totaling 8,528,000 households (76.0% of all the households with child(ren)), followed by 1,488,000 households of "three generation-family household" (13.3%). (Table 5, Figure 6)

Table 5 Yearly trends in the number of households with child(ren) by number of child(ren) and by household structures, and the average number of child(ren)

	Households with child(ren)	As a percentage for all households (%)	Number of children			Household structures					Average number of children in households with child(ren) (persons)
			One child	Two children	Three or more children	Nuclear family household	Household of a couple and unmarried child(ren) only	Household of a single parent and unmarried child(ren)	Three-generation-family household	Other households

Notes: 1) Figures for 2016 do not include data for Kumamoto Prefecture.

2) The figures above exclude cases where the "labour status" of mothers is "not stated".

3) "Others" include "executive of a corporation/organization", "owner of a self-employed business", "family workers", "person engaging in industrial homework (piecework done at home)", "others", and cases where it is not stated whether the person is employed or self-employed, or how the labour force status is referred to by the employer.

Looking at the yearly trends of the labour force status of mothers by age group of their youngest child, both "regular staff/employees" and "non-regular staff/employees" are on an upward trend.

On the other hand, the percentage of mothers "without work" is decreasing in all age groups. (Figure 7)

Figure 7 Yearly trends of the labour force status of mothers by age group of their youngest child

Notes: 1) Figures for 2016 do not include data for Kumamoto Prefecture.

2) The figures above exclude cases where the "labour status" of mothers is "not stated".

II Income etc. of various types of households

The income under the "2019 survey" means the income earned during the year from January 1 to December 31, 2018, and the savings/debts mean the amount on hand and the balance as of the last day of June, 2019.

"Self-assessed living conditions" are those as of July 11, 2019.

1 Yearly trends in income

The amount of average income per household in 2018 is 5,523,000 yen when calculated on the basis of "All households"; 3,126,000 yen when calculated on the basis of "Aged households"; 6,593,000 yen when calculated on the basis of "Household other than aged household"; and 7,459,000 yen when calculated on the basis of "Household with child(ren)". (Table 7, Figure 8)

Table 7 Yearly trends in the amounts of average income per household by household type

Household type Rate of change over previous year	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

Notes: 1) Figures for 2010 do not include data for Iwate, Miyagi and Fukushima prefectures.

2) Figures for 2011 do not include data for Fukushima Prefecture.

3) Figures for 2015 do not include data for Kumamoto Prefecture.

Figure 8 Yearly trends in the amounts of average income per household by household type

Notes: 1) Figures for 1994 do not include data for Hyogo Prefecture.

2) Figures for 2010 do not include data for Iwate, Miyagi and Fukushima prefectures.

3) Figures for 2011 do not include data for Fukushima Prefecture.

4) Figures for 2015 do not include data for Kumamoto Prefecture.

2 Income distribution

Looking at the relative frequency distribution of households by income class, the largest group is the income class of "2 million yen or more and less than 3 million yen" accounting for 13.6%, followed by the income class of "3 million yen or more and less than 4 million yen" accounting for 12.8%, and "1 million yen or more and less than 2 million yen" which accounts for 12.6%.

The median value (the border value separating the higher half of the income amounts from the lower half) is 4,370,000 yen and households earning less than the average income (5,523,000 yen) account for 61.1%. (Figure 9)

Figure 9 Relative frequency distribution of households by income class

3 Income distribution by the age group of householders

In terms of the amount of average income per household by age group of the house holder, householders aged "50 to 59" rank top, earning 7,560,000 yen, followed by those aged "40 to 49" and then by those aged "30 to 39". Meanwhile, ranked at the bottom are householders aged "29 and under" who earned 3,626,000 yen on average.

Looking at average incomes per household member, the age group of "50 to 59" rank top, earning 2,761,000 yen while ranked at the bottom is the age group of "70 and over" who earned 1,901,000 yen. (Figure 10)

Figure 10 Average incomes per household and average incomes per household member by the age group of householders

4 Average amounts of income by income type

Looking at average incomes per household by income type of each household type, in terms of all households, "Earned income" accounts for 74.3% of aggregated average income per household and "Public pension/Onkyu pension", 19.1% while, looking at aged household alone, "Public pension/Onkyu pension" accounts for 63.6% of the aggregated average income per aged household and "Earned income", 23.0%. (Table 8)

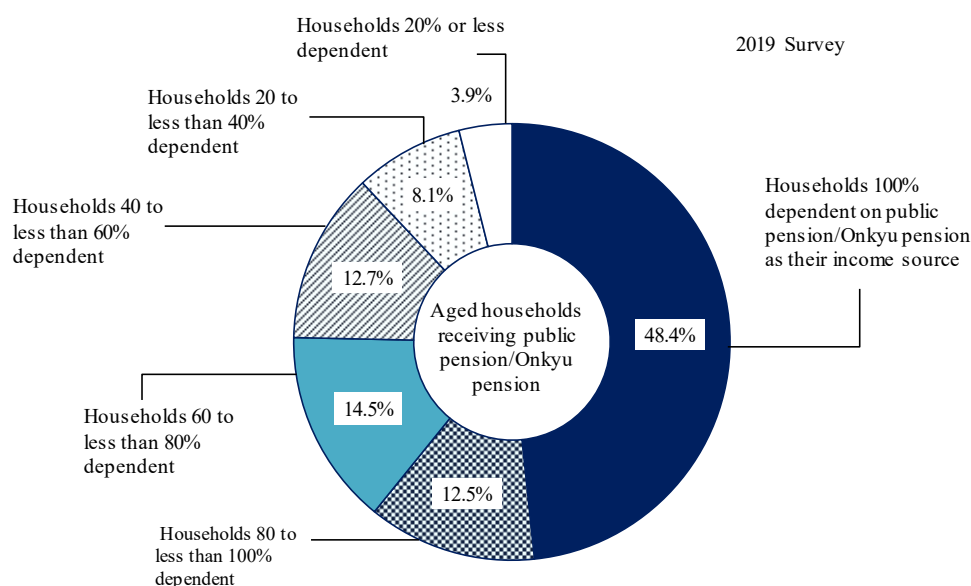

Table 8 Average incomes per household in terms of income type of each household type and their percentage distribution

Household type	Total income	Earned income	(regrouped) Employee compensation	Public pension/Onkyu pension	Property income	Social security benefits other than public pension	(regrouped) Child care allowance, etc.	Remitted allowance, Corporate pension, Personal pension and other income

Note: Figures for 2015 do not include data for Kumamoto Prefecture.

Of the Aged household receiving Public pension/Onkyu pension, "Households 100% dependent on Public pension/Onkyu pension as their income source" accounts for 48.4%. (Figure 11)

Figure 11 Percentage distribution of aged households receiving Public pension/Onkyu pension by the ratio of Public pension/Onkyu pension relative to their aggregated incomes

5 Savings and debts

Looking at savings in 2019, 81.9% of all households "Have savings" and the "Average amount of savings per household" stands at 10,774,000 yen. As for aged household, those that "Have savings" account for 80.1% and the "Average amount of savings per household" is 12,132,000 yen.

Looking at debts, 28.5% of all households "Have debts" and the "Average amount of debts per household" is 4,251,000 yen. As for household with child(ren), those that "Have debts" account for 55.8% and the "Average amount of debts per household" is 11,197,000 yen. (Table 9)

Table 9 Percentage distribution of households by the levels of savings and debts in each household type
(Unit: %) 2019

Levels of savings/debts - Average amounts of savings/debts	All households	Aged household	Household other than aged household	Household with child(ren)	Mother-child(ren) household
Level of savings					
Total	100.0	100.0	100.0	100.0	100.0
No savings	13.4	14.3	13.0	11.6	31.8
Have savings	81.9	80.1	82.7	84.4	65.0
Less than 50 (Unit: 10,000 yen)	4.6	4.0	4.8	4.3	9.9
50 - 100	3.6	2.6	4.0	4.9	7.0
100 - 200	7.5	5.8	8.2	10.1	9.4
200 - 300	6.1	5.1	6.5	8.1	4.7
300 - 400	6.1	5.1	6.5	7.7	4.0
400 - 500	3.2	2.6	3.4	4.4	3.7
500 - 700	9.3	9.2	9.4	10.6	7.1
700 - 1000	6.4	6.6	6.3	8.1	3.2
1000 - 1500	9.2	9.6	9.0	8.7	6.7
1500 - 2000	5.0	5.6	4.7	3.8	0.3
2000 - 3000	6.9	7.8	6.5	4.6	2.5
3000 or more	8.9	10.8	8.1	3.9	2.0
Amount of savings not stated	5.4	5.3	5.4	5.3	4.5
Not stated	4.7	5.6	4.3	4.0	3.2
Average amount of savings per household (10,000 yen)	1 077.4	1 213.2	1 017.6	723.8	389.8
Level of debts					
Total	100.0	100.0	100.0	100.0	100.0
No debts	63.9	80.5	56.4	38.9	71.0
Have debts	28.5	8.1	37.5	55.8	25.8
Less than 50 (Unit: 10,000 yen)	1.2	1.1	1.2	1.0	2.2
50 - 100	1.4	0.9	1.6	1.2	3.8
100 - 200	2.5	1.4	3.0	2.3	4.8
200 - 300	1.8	0.6	2.4	1.9	3.1
300 - 400	1.3	0.6	1.7	1.3	1.4
400 - 500	0.8	0.3	1.0	0.8	1.4
500 - 700	1.8	0.8	2.3	2.1	0.3
700 - 1000	1.8	0.4	2.5	3.1	2.3
1000 - 1500	3.7	0.7	5.1	7.1	3.0
1500 - 2000	3.0	0.4	4.2	7.7	0.9
2000 - 3000	5.0	0.3	7.1	15.2	2.2
3000 or more	3.2	0.3	4.5	10.1	-
Amount of debts not stated	0.8	0.3	1.0	2.0	0.3
Not stated	7.7	11.4	6.0	5.2	3.2
Average amount of debts per household (10,000 yen)	425.1	72.3	574.5	1 119.7	148.7

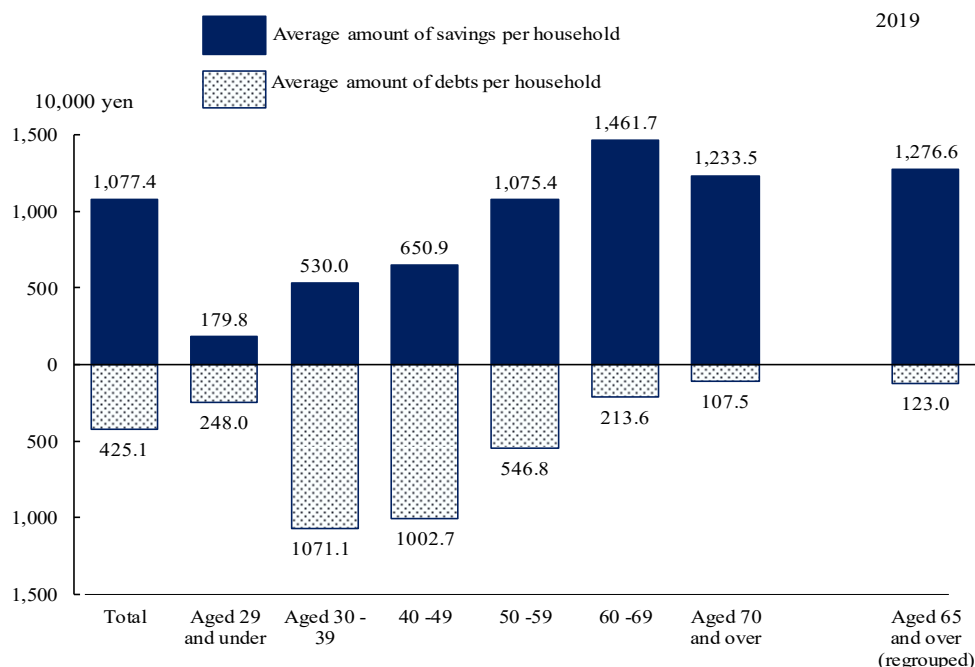

Notes: 1) "Average amount of savings per household" is calculated by excluding households not stating about their savings as well as households whose amount of savings is not stated.

2) "Average amount of debts per household" is calculated by excluding households not stating about their debts as well as households whose amount of debts is not stated.

Looking at the percentage distribution of the average amounts of savings per household by the age group of householders, householders "Aged 60 to 69" have the largest amount of savings reaching 14,617,000 yen, followed by householders "Aged 70 and over" whose average amount of savings is 12,335,000 yen.

Meanwhile, looking at the average amount of debts per household, householders "Aged 30 to 39" have the largest amount of debts reaching 10,711,000 yen, followed by householders "Aged 40 to 49" whose average amount of debts reaches 10,027,000 yen. (Figure 12)

Figure 12 Average amounts of savings and debts per household by the (ten-year) age group of householders

Notes: 1) "Average amount of savings per household" is calculated by excluding households not stating about their savings as well as households whose amount of savings is not stated.
 2) "Average amount of debts per household" is calculated by excluding households not stating about their debts as well as households whose amount of debts is not stated.
 3) "Total households" include the age of whose householder is not stated.

Looking at changes in savings by age group of the householder, households responding "Savings decreased" compared to the previous year account for 38.2% of all households, while households with householders aged 60 and over who responded the same account for more than 40% in each age group.

Looking at reasons for the decrease in household savings, more than 60% of all age groups answered "Expenditures for daily cost of living", while roughly 30% of households with householders aged 59 and under answered "Extraordinary expenditures for entrance fees/wedding expenses/travel, etc." Approximately 10% of households with householders aged 60 and over answered "Devaluation of assets including stock". (Table 10)

Table 10 Changes in savings by age group of the householder - percentage distribution of households by reason for a decrease in savings (based on multiple responses)

Age group of householder	Total	Savings increased	No change	Savings decreased	Reason for decrease (based on multiple responses)				
					Expenditures for daily cost of living	Purchase of land and/or house	Extraordinary expenditures for entrance fees/wedding expenses/travel, etc.	Devaluation of assets including stock	Others
Total	100.0	12.5	37.9	38.2	(69.2)	(7.3)	(24.1)	(8.0)	(28.7)
Aged 29 and under	100.0	27.8	44.1	22.1	(67.8)	(8.4)	(28.1)	-	(33.7)
Aged 30 - 39	100.0	26.5	37.3	30.8	(63.8)	(18.5)	(29.9)	(3.0)	(26.1)
40 - 49	100.0	19.6	40.3	33.3	(65.6)	(9.3)	(36.5)	(3.0)	(25.2)
50 - 59	100.0	17.1	40.4	32.6	(60.5)	(6.9)	(36.4)	(6.6)	(32.4)
60 - 69	100.0	9.9	35.5	43.0	(72.8)	(7.2)	(19.9)	(8.5)	(30.1)
Aged 70 and over	100.0	4.5	36.8	42.9	(72.1)	(5.0)	(17.4)	(11.0)	(27.8)
(regrouped) Aged 65 and over	100.0	5.3	36.4	43.4	(72.9)	(5.4)	(17.7)	(10.3)	(27.8)

Notes: 1) "Total" includes households whose change in savings is not stated.
 2) "Total households" include the age of whose householder is not stated.

6 Poverty rates

The poverty line (50% of the median for the equivalent disposable income) for the year 2018 stands at 1,270,000 yen, and the "Relative poverty rate" (the ratio of people living below the poverty line) is 15.4% (up 0.3 points from 2015). Meanwhile, the "Child poverty rate" (aged 17 and under) is 13.5% (up 0.4 points from 2015).

As for members of "Active household with child(ren)" (household with child(ren) whose householder is aged 18 and over but under 65), the poverty rate is 12.6% (up 0.3 points from 2015). More specifically, the rate reaches 48.1% (up 2.7 points from 2015) for households with "one adult" while the rate is 10.7% (no change from 2015) for households with "two or more adults".

The "Relative poverty rate" calculated based on the new OECD standard for income definition (automobile tax, corporate pension, are newly added to the contribution used to calculate disposable income) is 15.7% and "Child poverty rate" is 14.0%. As for members of "Active household with child(ren)", the poverty rate is 13.1% and more specifically, the rate reaches 48.3% for households with "one adult" while the rate is 11.2% for households with "two or more adults". (Table 11, Figure 13)

Table 11 Yearly trends in poverty rate

	1985	1988	1991	1994	1997	2000	2003	2006	2009	2012	2015	2018

Notes: 1) Figures for 1994 do not include data for Hyogo Prefecture.

2) Figures for 2015 do not include data for Kumamoto Prefecture.

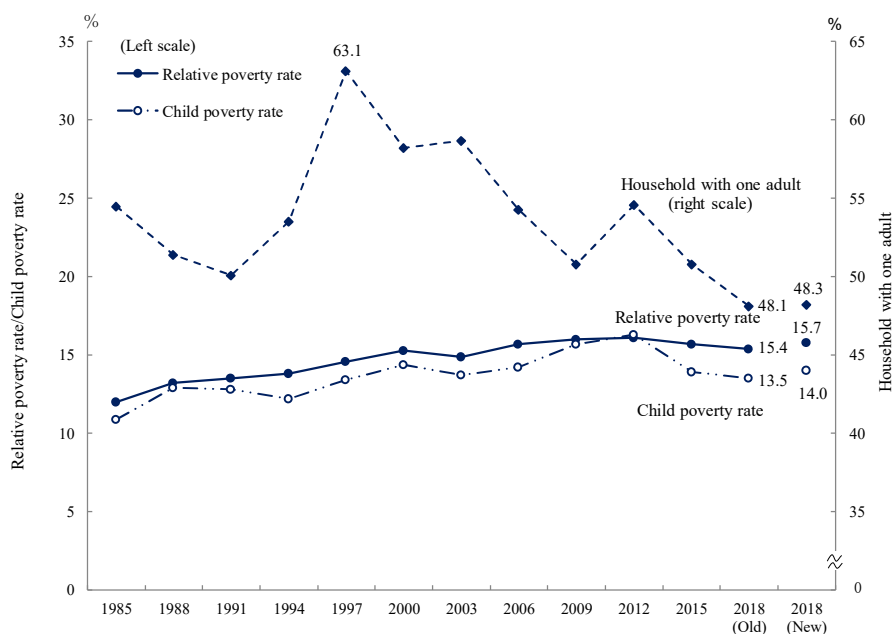

3) The 2018 "New standard" is a new OECD standard for income definition revised in 2015, in which the "automobile tax/light-weight vehicle tax/vehicle weight tax", "premiums for corporate pension" and "allowance" are further deducted from conventional disposable income.

4) The poverty rate is calculated based on the OECD standards.

5) Adult means a person aged 18 and over and Child means a person aged 17 and under. Active household means a household where the age of the householder is 18 and over but under 65.

6) The data above does not cover household members the amount of whose equivalent disposable income is not stated.

Figure 13 Yearly trends in poverty rate

Notes: 1) Figures for 1994 do not include data for Hyogo Prefecture.

2) Figures for 2015 do not include data for Kumamoto Prefecture.

3) The 2018 "New standard" is a new OECD standard for income definition revised in 2015, in which the "automobile tax/light-weight vehicle tax/vehicle weight tax", "premiums for corporate pension" and "allowance" are further deducted from conventional disposable income.

4) The poverty rate is calculated based on the OECD standards.

5) Adult means a person aged 18 and over and Child means a person aged 17 and under. Active household means a household where the age of the householder is 18 and over but under 65.

6) The data above does not cover household members the amount of whose equivalent disposable income is not stated.

Looking at the relative frequency distribution (old standard) of the number of household members by the amount of equivalent disposable income, compared to 2015, as for "All household members", it fell in the range between 400,000 and less than 1,200,000 yen, whereas it rose in the range between 3,200,000 and less than 7,000,000 yen.

As for "Children" (aged 17 and under), it fell roughly in the range between 400,000 and less than 1,200,000 yen, whereas it rose in the range between 2,800,000 and 5,000,000 yen.

As for "Active household with child(ren) and one adult", it fell in the range between 400,000 and less than 1,200,000 yen, whereas it rose in the range between 1,200,000 and less than 1,400,000 yen and the range between 1,800,000 and less than 2,400,000 yen. (Figure 14)

Figure 14 Relative frequency distribution of the number of household members by equivalent disposable income class (old standard)

Notes: 1) Adult means a person aged 18 and over and Child means a person aged 17 and under. Active household means a household where the age of the householder is 18 and over but under 65.

2) The data above does not cover household members the amount of whose equivalent disposable income is not stated.

7 Self-assessed living conditions

Looking at the percentage distribution of households by self-assessed living conditions, "Difficult" ("Very difficult" and "Somewhat difficult") accounts for 54.4% (Figure 15).

Figure 15 Yearly trends in self-assessed living conditions of households

Note: Figures for 2016 do not include data for Kumamoto Prefecture.

Looking at self-assessed living conditions by household type, 86.7% of "Mother-child household" and 60.4% of "Household with child(ren)" responded "Difficult" (Figure 16).

Figure 16 Self-assessed living conditions by household type

Notes: 1) Figures in [] are 2016 data.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

III Health of household members

1 Subjective symptoms

The ratio of persons who have some sort of subjective symptoms of a disorder or disease (persons with subjective symptoms) stands at 302.5 persons per thousand population (the ratio is referred to as the "ratio of persons with subjective symptoms").

Looking at the ratio of persons with subjective symptoms (per thousand population) by gender, the ratio for the male population stands at 270.8, and that for the female population stands at 332.1, thus the ratio is higher in the female population.

Looking at the ratio by age group, the population "aged 10 to 19" exhibits the lowest ratio, standing at 157.1, and the figure rises with age group to reach 511.0 in the population "aged 80 and over". (Table 12)

By type of symptoms, in the male population, the ratio of persons with subjective symptoms of "lower back pain" is the highest, followed by "stiff shoulder" and "stuffy nose/runny nose". Meanwhile, in the female population, "stiff shoulder" ranks at the top, followed by "lower back pain" and "joint pain in hands and feet" (Figure 17).

Looking at elderly persons (aged 65 and over) with back or foot pain (persons with subjective symptoms of either or both of "lower back pain" and "joint pain in hands and feet"; hereinafter referred to as "back or foot pain"), the male population stood at 205.5, while the female population stood at 254.5 (see Statistics Table 9 on page 35).

(Reference) Goals of "Health Japan 21 (second term)" - Targets for decreasing the number of elderly people with back or foot pain (per 1,000) - Male: 200 persons, Female: 260 persons [fiscal year 2022]

Table 12 Ratio of persons with subjective symptoms by gender and age group (per thousand population)

(Unit: thousand population)

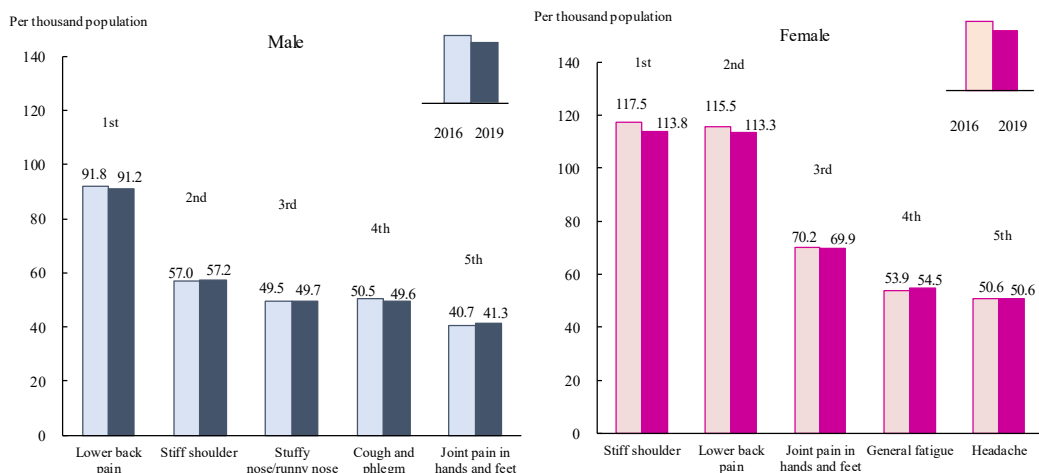

Age group	2019			2016		
	Total	Male	Female	Total	Male	Female
Total	302.5	270.8	332.1	305.9	271.9	337.3
Aged 9 and under	178.0	184.9	170.7	185.7	198.1	172.8
10 to 19	157.1	154.6	159.7	166.5	162.4	170.7
20 to 29	194.6	159.6	229.3	209.2	167.7	250.3
30 to 39	249.3	206.2	291.3	250.6	209.0	291.2
40 to 49	268.4	225.6	310.1	270.0	224.9	313.6
50 to 59	309.1	260.6	355.2	308.8	263.0	352.8
60 to 69	338.9	322.3	354.5	352.8	330.6	373.5
70 to 79	434.1	414.1	451.5	456.5	432.2	477.2
Aged 80 and over (Regrouped)	511.0	498.8	518.8	520.2	499.1	533.2
Aged 65 and over	433.6	413.2	450.3	446.0	417.5	468.9
Aged 75 and over	495.5	477.3	508.6	505.2	480.5	522.5

Notes: 1) Hospital inpatients are not included in the number of persons with subjective symptoms but are included in the number of household members used as the denominator.

2) Data for "Total" includes persons whose age is not stated.

3) Figures for 2016 do not include data for Kumamoto Prefecture.

Figure 17 Top 5 symptoms by gender in terms of the ratio of persons with subjective symptoms (based on multiple responses)

Notes: 1) Hospital inpatients are not included in the number of persons with subjective symptoms but are included in the number of household members used as the denominator.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

2 Outpatient treatments

The ratio of persons visiting hospital to receive treatment for an injury or disease (outpatients) stands at 404.0 per thousand population (this ratio is referred to as "outpatient ratio").

Looking at the outpatient ratio (per thousand population) by gender, the figure stands at 388.1 for the male population, and at 418.8, for the female population, thus the ratio is higher in the female population.

Looking at the ratio by age group, the lowest figure is observed in the population "aged 10 to 19", standing at 140.1 and the figure increases with age group to reach 730.3 in the population "aged 80 and over". (Table 13)

Meanwhile, looking at the ratio by type of disease or injury, in the male population, the figure is the highest with regard to "high blood pressure", followed by "diabetes" and "dental diseases" while in the female population, the figure is the highest with regard to "high blood pressure", followed by "dyslipidemia (hypercholesterolemia, etc.)" and "eye diseases" (Figure 18).

Table 13 Outpatient ratio by gender and age group (per thousand population)

(Unit: thousand population)

Age group	2019			2016		
	Total	Male	Female	Total	Male	Female
Total	404.0	388.1	418.8	390.2	372.5	406.6
Aged 9 and under	150.4	162.0	138.0	160.0	172.5	147.0
10 to 19	140.1	147.1	132.7	141.1	144.3	137.6
20 to 29	157.1	131.1	182.9	156.7	129.8	183.4
30 to 39	216.7	188.6	244.0	206.0	180.1	231.3
40 to 49	287.2	270.8	303.2	275.5	264.3	286.3
50 to 59	427.5	417.6	437.0	418.8	411.5	425.9
60 to 69	586.3	593.9	579.1	582.2	583.3	581.1
70 to 79	706.0	707.9	704.3	708.0	704.2	711.2
Aged 80 and over	730.3	737.1	725.9	730.3	729.1	731.0
(Regrouped)						
Aged 65 and over	689.6	692.8	686.9	686.7	681.7	690.6
Aged 75 and over	730.5	735.7	726.8	727.8	725.1	729.6

Notes: 1) Inpatients are not included in the number of outpatients but are included in the number of household members used as the denominator.

2) Data for "Total" includes persons whose age is not stated.

3) Figures for 2016 do not include data for Kumamoto Prefecture.

Figure 18 Top 5 diseases by gender in terms of outpatient ratio (based on multiple answers)

Notes: 1) Inpatients are not included in the number of outpatients but are included in the number of household members used as the denominator.

2) Figures for 2016 do not include data for Kumamoto Prefecture.

3 Subjective health assessments

Looking at the percentage distribution of subjective health assessments of persons aged 6 and over (excluding inpatients), persons who assessed themselves to be "in good health" (which combines "very good", "good" and "not bad"; the same applies hereinafter) account for 86.1%; "not good", 10.9%; and "bad", 1.7%.

Examining those assessing themselves to be "in good health" by gender, 87.2% of the male population and 85.1% of the female population responded they were "in good health". (Table 14)

Table 14 Percentage distribution of subjective health assessments by gender (of persons aged 6 and over)

(Unit: %) 2019

Gender	Total	In good health			Not good	Bad	Not stated	
		Very good	Good	Not bad				
Total	100.0	86.1	21.1	18.5	46.5	10.9	1.7	1.2
Male	100.0	87.2	22.6	18.5	46.0	9.9	1.7	1.2
Female	100.0	85.1	19.7	18.4	46.9	11.9	1.7	1.3

Note: Data above does not include inpatients.

4 Intake status of health food such as supplements

Looking at the percentage distribution of persons aged 6 and over (excluding inpatients) who take health food such as supplements by gender, the male population stands at 21.7%, while the female population stands at 28.3%, thus the percentage is higher in the female population.

Looking at the ratio by age group, the male population "aged 60 to 69" and the female population "aged 50 to 59" account for the largest percentage respectively at 28.1% and 37.6%. (Figure 19)

Figure 19 Percentage distribution of persons (aged 6 and over) who take health food such as supplements by gender and age group

Note: Data above does not include inpatients.

5 Worries and stress

Looking at the percentage distribution of subjective health assessments of persons aged 12 and over (excluding inpatients), by the presence of worries and stress in their daily life, those "with worries and stress" account for 47.9% and those "without worries and stress" account for 50.6%. (Figure 20)

Examining the percentage of those with worries and stress by gender, 43.0% of the male population and 52.4% of the female population have some sort of worries and stress, thus the percentage is higher in the female population. Meanwhile, in terms of age group, in both the male and the female populations, those in their 30s to 50s exhibit the highest percentage, with roughly 50% of the male population and 60% of the female population. (Figure 21)

Figure 20 Percentage distribution by the presence of worries and stress (of persons aged 12 and over)

Figure 21 Percentage distribution of persons with worries and stress by gender and age group (of persons aged 12 and over)

6 Mental state

Looking at the percentage distribution of subjective health assessments of persons aged 12 and over (excluding inpatients), by the grade of points (based on points obtained by adding up points earned from 6 questions; for each question 0 to 4 points are earned), persons falling under a grade of "0 to 4 points" account for the largest percentage accounting for 68.3%. Also, in terms of percentage distribution of mental states by age group, persons earning a grade of "0 to 4 points" account for the largest percentage in every age group.

The percentage of individuals who suffer from psychological distress equivalent to mood disorders or anxiety disorders (aged 20 and over, with 10 points or more) is 10.3%. (Figure 22)

(Reference) Goals of "Health Japan 21 (second term)" - Targets for decreasing the percentage of individuals who suffer from psychological distress equivalent to mood disorders or anxiety disorders - Target value: 9.4% [fiscal year 2022]

Figure 22 Percentage distribution of mental states (grade of points) by age group (of persons aged 12 and over)

7 Smoking habit

Comparing the levels of smoking habit of persons aged 20 and over (excluding inpatients), by gender and age group with 2001 data, the percentages of those who answered "have a smoking habit" (which combines "every day" and "occasionally") have been decreasing in most age groups, and both in the male and female populations, the biggest declines are observed in the age group of "20 to 29". (Figure 23)

Figure 23 Yearly comparison, by gender and by age group, of smoking populations (of persons aged 20 and over)

Notes: 1) Data above does not include inpatients.
2) Figures for 2016 do not include data for Kumamoto prefecture.

8 Health checkups and through medical checkup

Looking at the percentage distribution of subjective health assessments of persons aged 20 and over (excluding inpatients), who received a health checkup or a thorough medical checkup during the past year by gender, 74.0% of the male population and 65.6% of the female population received any of such checkups, resulting in higher percentage in the male population. In terms of age group, in both the male and the female populations, the percentage is the highest in the age group of "50 to 59", and 81.8% of the male population in that age group and 73.2% of the female population in the same age group received some sort of checkup. (Table 15)

The rate of persons aged 40 to 74 who received a health checkup or a thorough medical checkup is 73.3%.

(Reference) Goals of "Future Investment Strategy 2017 (Short-to-Medium-Term Process Schedule)" - Percentage of persons aged 40 to 74 who received a health checkup or a thorough medical checkup (including specific health checkups) in each year - Target value: 80% or more [by the year 2020]

Table 15 Distribution, by gender and by age group, of persons (aged 20 and over) who received a health checkup or a through medical checkup

(Unit: %)										2019
Gender	Total	Aged 20 to 29	30 to 39	40 to 49	50 to 59	60 to 69	70 to 79	Aged 80 and over	(Regrouped) Aged 40 to 74	
Total	69.6	68.4	69.1	76.4	77.4	70.3	64.7	53.3	73.3	
Male	74.0	70.9	77.9	81.4	81.8	73.3	66.0	56.0	77.2	
Female	65.6	65.9	60.5	71.5	73.2	67.4	63.5	51.6	69.7	

Note: Data above does not include inpatients.

9 Cancer screening

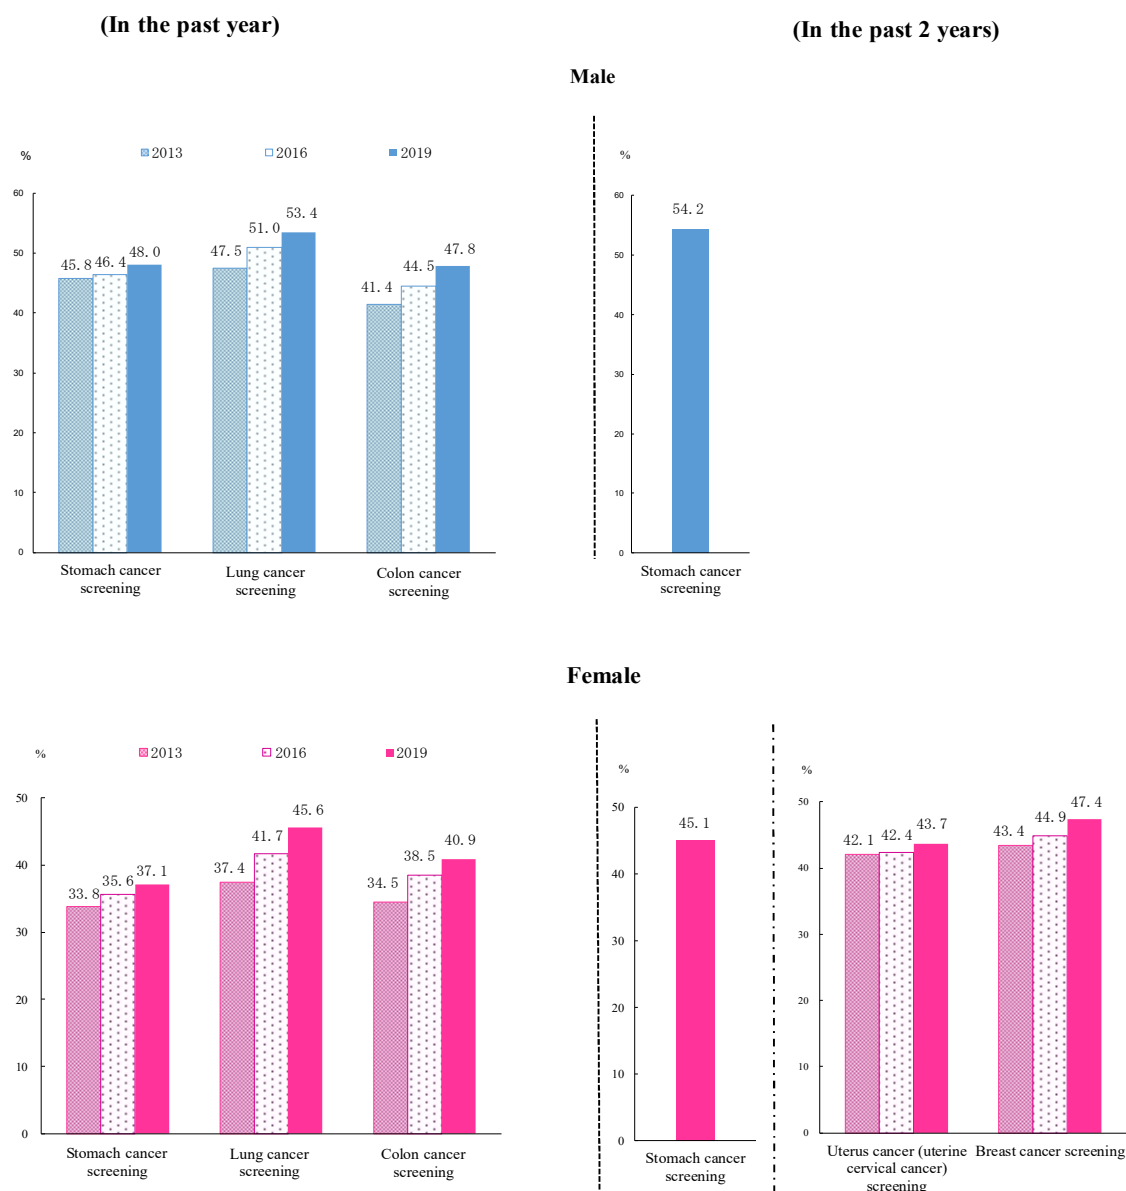

Looking at the percentage distribution of persons aged 40 to 69 (excluding inpatients) who received a stomach cancer screening, lung cancer screening or colorectal cancer screening in the past year by gender, the most common was "lung cancer screening" in both the male and the female populations at 53.4% and 45.6%, respectively at.

Meanwhile, looking at the percentage distribution of persons (aged 50 to 69 and excluding inpatients) who received a stomach cancer screening, those (aged 20 to 69 and excluding inpatients) who received a uterus cancer (uterine cervical cancer) screening, and those (aged 40 to 69 and excluding inpatients) who received a breast cancer screening in the past two years by gender, 54.2% of the male population and 45.1% of the female population received a "stomach cancer screening", 43.7% of the female population received a "uterus cancer (uterine cervical cancer) screening" and 47.4% of the female population received a "breast cancer screening".

Increases are observed in all screening tests. (Figure 24)

(Reference) Goals of "Basic Plan to Promote Cancer Control Programs (third term)"
 - Increase in participation rate of cancer screenings - Target value: 50% [fiscal year 2022]

Figure 24 Trends in percentages, by gender, for persons aged 40 to 69 who received a cancer screening (for stomach cancer screening, persons aged 50 to 69 in the past 2 years, and for uterus cancer (uterine cervical cancer) screening, persons aged 20 to 69)

Notes: 1) The data above does not include inpatients.

2) The target age for the calculation of the rate of persons who received a cancer screening was determined to be 40 to 69 years of age (for uterus cancer (uterine cervical) screening, 20 to 69 years of age) based on the "Basic Plan to Promote Cancer Control Programs" (adopted by the Cabinet in June 8, 2012).

3) After the 2019 survey, the rate of persons who received a stomach cancer screening in the past two years was also calculated and the target age for the calculation was determined to be 50 to 69 years of age based on the partial revision of the "Guidelines for Conducting Cancer Prevention Priority Health Education and Cancer Screenings (Notification attachment issued by the Director of the Health Service Bureau, Ministry of Health, Labor and Welfare on March 31, 2008)".

4) Figures for 2016 do not include data for Kumamoto Prefecture.

IV Long-term care

1 Households with a person requiring long-term care

Looking at household structures of households with a person requiring support or requiring long-term care under the Long-Term Care Insurance Act (hereinafter referred to as a "person requiring long-term care, etc."), "nuclear family household" account for the largest percentage accounting for 40.3%, followed by "one-person household" accounting for 28.3%, and then by "other households" accounting for 18.6%.

In terms of yearly trends, the percentage of "nuclear family household" is increasing and that of "three-generation-family household" is decreasing. (Table 16)

Table 16 Yearly trends in the percentage distribution of household structures of households with a person requiring long-term care etc.

(Unit: %)

Year	Total	One-person household	Nuclear family household	(Regrouped) Household of a couple only	Three-generation-family household	Other households	(Regrouped) Aged household
2001	100.0	15.7	29.3	18.3	32.5	22.4	35.3
2004	100.0	20.2	30.4	19.5	29.4	20.0	40.4
2007	100.0	24.0	32.7	20.2	23.2	20.1	45.7
2010	100.0	26.1	31.4	19.3	22.5	20.1	47.0
2013	100.0	27.4	35.4	21.5	18.4	18.7	50.9
2016	100.0	29.0	37.9	21.9	14.9	18.3	54.5
2019	100.0	28.3	40.3	22.2	12.8	18.6	57.1

Note: Figures for 2016 do not include data for Kumamoto Prefecture.

Looking at the percentage distribution of the present care requirement levels by household structure, in "one-person household", the percentage of households with a person requiring low level care is higher while in "nuclear family household" and "three-generation household", the percentage of households with a person requiring high level care is high. (Table 17)

Table 17 Percentage distribution of the present long-term care requirement levels by the structure of households with a person requiring long-term care, etc.

(Unit: %)

Present care requirement level	Total	One-person household	Nuclear family household	(Regrouped) Household of a couple only	Three-generation-family household	Other households	2019
							(Regrouped) Aged household
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Households with a person requiring support	31.0	41.4	29.5	30.7	21.3	25.1	34.6
Support level 1	14.7	21.5	13.4	14.6	9.5	10.6	17.3
Support level 2	16.3	19.8	16.1	16.1	11.8	14.6	17.3
Households with a person requiring long-term care	66.4	55.7	67.3	66.6	76.5	73.5	62.9
Long-term care level 1	19.8	20.4	17.7	19.0	22.9	21.1	20.0
Long-term care level 2	20.7	16.9	20.7	22.1	23.2	24.9	20.0
Long-term care level 3	12.2	9.0	12.0	10.0	17.9	13.5	10.0
Long-term care level 4	7.5	5.9	8.1	7.6	6.6	9.5	7.3
Long-term care level 5	6.1	3.5	8.7	7.9	5.9	4.5	5.6

Notes: 1) "Total" includes cases where the long-term care level is not stated.

2) As for households with more than one person requiring long-term care, etc., classification is based on the care level of a person requiring higher level care.

3) "Present care requirement level" means the care requirement level as of June 2019.

2 Person requiring long-term care, etc.

Looking at the yearly trends in the percentage distribution of the ages of persons requiring long-term care, etc., the percentages of higher age groups are increasing. Looking at the percentage distribution of the ages of persons requiring long-term care, etc. for 2019, the male population "aged 80 to 84" and the female population "aged 90 and over" account for the highest percentages, respectively at 23.2% and 28.6%. (Figures 25, 26)

Figure 25 Yearly trends in percentage distribution of persons requiring long-term care, etc. by age group

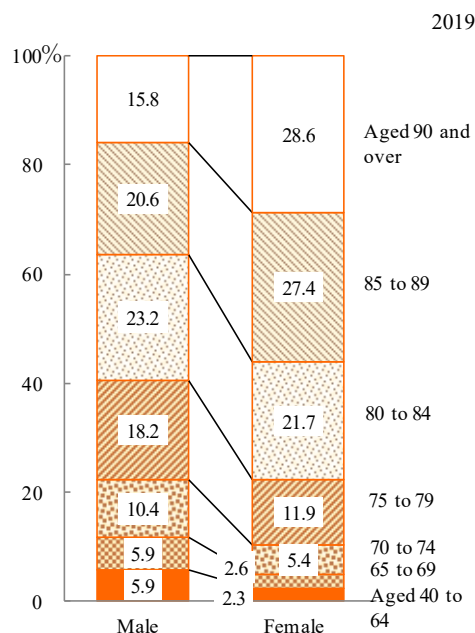

Figure 26 Percentage distribution of persons requiring long-term care, etc. by gender and age group

Looking at the percentage distribution of major causes for long-term care by the present care requirement level, in the case of persons requiring support, "joint disorder" accounts for the largest percentage standing at 18.9%, followed by "infirmity due to aging" standing at 16.1%. Persons requiring long-term care, the most common cause is "dementia" standing at 24.3%, followed by "cerebrovascular disease (stroke)" standing at 19.2%. (Table 18)

Table 18 Percentage distribution of major causes (Top 3 causes) of long-term care by the present care requirement level

Present care requirement level	1st		2nd		3rd	
	Cause	Percentage (%)	Cause	Percentage (%)	Cause	Percentage (%)
Total	Dementia	17.6	Cerebrovascular disease (stroke)	16.1	Infirmity due to aging	12.8
Persons requiring support	Joint disorder	18.9	Infirmity due to aging	16.1	Bone fracture/fall	14.2
Support level 1	Joint disorder	20.3	Infirmity due to aging	17.9	Bone fracture/fall	13.5
Support level 2	Joint disorder	17.5	Bone fracture/fall	14.9	Infirmity due to aging	14.4
Persons requiring long-term care	Dementia	24.3	Cerebrovascular disease (stroke)	19.2	Bone fracture/fall	12.0
Long-term care level 1	Dementia	29.8	Cerebrovascular disease (stroke)	14.5	Infirmity due to aging	13.7
Long-term care level 2	Dementia	18.7	Cerebrovascular disease (stroke)	17.8	Bone fracture/fall	13.5
Long-term care level 3	Dementia	27.0	Cerebrovascular disease (stroke)	24.1	Bone fracture/fall	12.1
Long-term care level 4	Cerebrovascular disease (stroke)	23.6	Dementia	20.2	Bone fracture/fall	15.1
Long-term care level 5	Cerebrovascular disease (stroke)	24.7	Dementia	24.0	Infirmity due to aging	8.9

Note: "Present care requirement level" means the care requirement level as of June 2019.

3 Principal caregivers

Looking at principal caregivers, persons "co-resident" with persons requiring long-term care, etc. account for the largest percentage standing at 54.4%, followed by "family member living apart" accounting for 13.6%.

Looking at the relationship with principal "co-resident" caregivers with persons requiring long-term care, etc., the most common is "spouse" accounting for 23.8%, followed by "child" accounting for 20.7% and then by "child's spouse" accounting for 7.5%. (Figure 27)

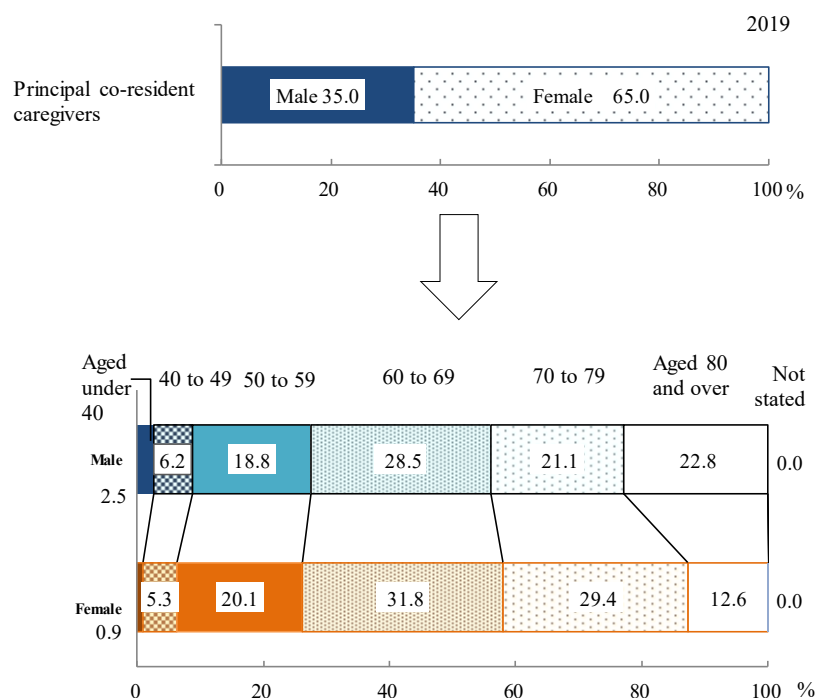

Meanwhile, examining principal "co-resident" caregivers by gender, female caregivers account for a larger percentage standing at 65.0% than male caregivers accounting for 35.0%. Meanwhile, in terms of age group, in both the male and the female populations, those "aged 60 to 69" exhibit the highest percentage, accounting for 28.5% and 31.8% respectively. (Figure 28)

Figure 27 Percentage distribution of principal caregivers by their relationship to persons requiring long-term care, etc.

Notes: 1) Figures in [] are 2016 data.
2) Figures for 2016 do not include data for Kumamoto Prefecture.

Figure 28 Percentage distribution of principal co-resident caregivers by gender and age group

Looking at the combinations of principal co-resident caregivers and persons requiring long-term care, etc. by age group, persons requiring long-term care, etc. aged "70 to 79", persons aged "70 to 79" are the most common caregivers accounting for 56.0% while those requiring long-term care, etc. aged "80 to 89", persons aged "50 to 59" are the most common caregivers, reaching 31.6%. (Table 19)

In terms of yearly trends, increases are observed in combinations where both are aged 60 and over, 65 and over and 75 and over. (Figure 29)

Table 19 Percentage distribution of principal co-resident caregivers by age group with respect to each age group of persons requiring long-term care, etc.

(Unit: %)

2019

Age group of principal co-resident caregivers	Persons requiring long-term care, etc.								
	Total	Aged 40 to 64	65 to 69	70 to 79	80 to 89	Aged 90 and over	(Regrouped) Aged 60 and over	(Regrouped) Aged 65 and over	(Regrouped) Aged 75 and over
Total	[100.0]	[4.1]	[4.2]	[23.7]	[42.7]	[25.3]	[97.6]	[95.9]	[83.5]
Aged under 40	1.5	1.8	7.4	1.8	1.1	0.6	1.5	1.4	1.1
Aged 40 to 49	5.6	16.0	4.4	9.5	4.3	2.5	5.1	5.1	4.8
50 to 59	19.6	24.4	5.7	9.6	31.6	10.3	19.2	19.4	21.7
60 to 69	30.6	29.5	59.3	12.7	21.6	58.2	31.3	30.7	29.1
70 to 79	26.5	18.8	21.6	56.0	16.2	18.4	26.5	26.8	24.8
Aged 80 and over	16.2	9.5	1.6	10.2	25.1	10.1	16.4	16.4	18.5
(regrouped) Aged 60 and over	73.3	57.8	82.5	78.8	62.9	86.6	74.2	73.9	72.3
(regrouped) Aged 65 and over	58.8	39.2	65.9	77.1	47.5	62.8	59.4	59.7	57.2
(regrouped) Aged 75 and over	30.2	18.5	7.7	40.2	38.6	12.4	30.5	30.7	33.1

Note: "Total" include principal caregivers whose age is not stated.

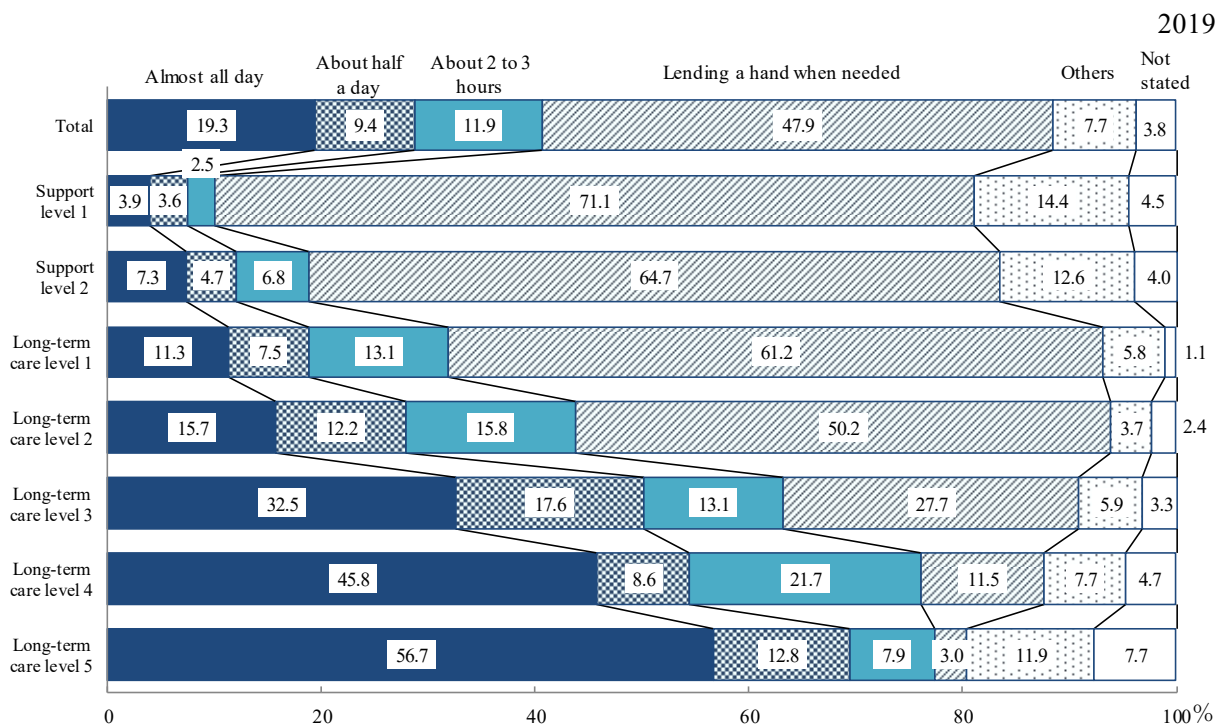

Figure 29 Yearly trends in percentage distribution of combinations of principal co-resident caregivers and persons requiring long-term care, etc. by age group

Note: Figures for 2016 do not include data for Kumamoto Prefecture.

Looking at the percentage distribution of care hours spent by principal co-resident caregivers by care requirement level, from "support level 1" through "long-term care level 2", the percentage of "lending a hand when needed" is the highest, while at "long-term care level 3" and higher levels, the percentage of "almost all day" is the highest. (Figure 30)

Figure 30 Percentage distribution of care hours spent by principal co-resident caregivers by care requirement level

Note: "Total" includes cases where the long-term care level is not stated.

Looking at principal co-resident caregivers whose care hours are "almost all day", "male" caregivers account for roughly 30% and "female" caregivers account for roughly 70%.

By relationship, the most common is female "spouse", followed by female "child" and then by male "spouse". (Figure 31)

Figure 31 Percentage distribution by relationship between principal co-resident caregivers whose care hours are "almost all day" and persons requiring long-term care, etc.

Notes: 1) "Other relative" includes "parent(s)".

2) Figures for 2016 do not include data for Kumamoto Prefecture.

Notes: 1) Figures for 2015 do not include data for Kumamoto Prefecture.

2) The 2018 "New standard" is a new OECD standard for income definition revised in 2015, in which the "automobile tax/light-weight vehicle tax/vehicle weight tax", "premiums for corporate pension" and "allowance" are deducted from conventional disposable income.

3) Adult means a person aged 18 and over and Child means a person aged 17 and under. Active household means a household the age of whose householder is 18 and over but under 65.

4) The data above does not cover household members the amount of whose equivalent disposable income is not stated.

Table 9 Household members and number and ratio of persons with subjective symptoms (relative to 1,000 population) by gender/age group/symptom (based on multiple responses)

(Unit: thousand population, as a ratio to 1,000 population)

2019

Not stated	2.4	3.1	3.1	3.1	0.9	0.7	1.2	0.9	1.9	-

Notes: 1) "Total" includes cases where the long-term care level is not stated.

2) "Present care requirement level" means the care requirement level as of June 2019.

Explanation of terms

1 **"Household"** means a group of people who live together in the same residence and share the same household income, or a single person who independently maintains a residence or independently supports himself/herself.

2 **"Householder"** means, regardless of age and income, a person declared by a household as the head of the family who plays a central role in managing household matters.

3 **"Household member"** means respective persons comprising a household.

It should be pointed out that a person who is temporarily living apart from other household members as of the date of the survey was included in the calculation of household members. However, business bachelors, students studying abroad, persons living in social welfare institutions were excluded from the calculation.

4 **"Household structures"** is based on the following classification:

- (1) One-person household
A household comprising of only one household member.
- (2) Nuclear family household
 - a. Household of a couple only
A household consisting of a householder and his/her spouse.
 - b. Household of a couple and unmarried child (ren) only
A household consisting of parents and their unmarried child(ren) only.
 - c. Household of a single parent and unmarried child (ren)
A household consisting of either father or mother and his/her unmarried child(ren).
- (3) Three-generation-family household
A household consisting of three or more generations of people lineally related with the householder.
- (4) Other households
Other than those mentioned in (1) to (3) above.

5 **"Household types"** is based on the following classification:

- (1) Aged household
A household consisting of person(s) aged 65 and over only, or a household of person(s) aged 65 and over and unmarried person(s) aged under 18.
- (2) Mother-child(ren) household
A household consisting of a female aged under 65 without spouse (including the case where it has been unknown over long period whether the spouse is alive or dead) due to the death of the spouse, after divorce or for any other reason (including unmarried relationship) and her child(ren) aged under 20 (including adopted child(ren)).
- (3) Father-child(ren) household
A household consisting of a male aged under 65 without spouse (including the case where it has been unknown over long period whether the spouse is alive or dead) due to the death of the spouse, after divorce or for any other reason (including unmarried relationship) and his child(ren) aged under 20 (including adopted child(ren)).
- (4) Other households
Other than those mentioned in (1) to (3) above.

6 **"Family types"** is based on the following classification:

- (1) One-person household
A family structure where the household consists of only one person.
- (2) Household of a couple only
A family structure where the householder is living together with his/her spouse only.
- (3) Coresident with child(ren)
 - a. Coresident with married child(ren) and the child's spouse

b. Coresident with child(ren) without spouse
Where living with unmarried child(ren), child without spouse due to death of or divorce from his/her spouse, or child with spouse currently living separately from the other household members.

(4) Coresident with other relative(s)

Coresident with relative(s) other than child(ren).

(5) Coresident with person(s) other than relative(s)

Coresident with person(s) other than relative(s) mentioned in (1) to (4) above.

7 **"Child"** means an unmarried person aged under 18.

8 **"Mother"** in a household with child(ren) means the mother of the youngest child in the household (hereinafter referred to as the "youngest child"). In Table 6, Figure 7 (page 8) and Statistics Tables 4 and 5 (page 31), households without a mother of the youngest child are excluded from tabulation.

9 **"With work"** means that a person had paid work during May of 2019. However, even if the person was not engaged in any paid work during the said period, the person may be considered as being "with work" in the case of any one of the following:

(1) An employed person who received, or was supposed to receive a salary or wage, within May of 2019 (for example, in the case where the person was absent from work due to illness);

(2) A self-employed person who was not engaged in work but the business was in operation during May of 2019;

(3) A person who is a member of the family of a self-employed business owner and was helping the family business; or

(4) A person who was on a childcare (family care) leave under the employment regulations of the organization for which the person was working.

More specifically, persons "with work" are grouped into the following ten categories:

① Regular employee whose term of employment is not stated in his/her employment contract;

② Regular employee whose term of employment is at least one year;

③ Persons in employment whose term of employment is at least one month but shorter than one year;

④ Persons in employment working on a daily wage basis or based on an employment contract whose term is shorter than one month;

⑤ Executive of a corporation/organization

⑥ Owner of a self-employed business (with employees)

⑦ Owner of a self-employed business (without employees)

⑧ Family workers

⑨ Person engaging in industrial homework (piecework done at home)

⑩ Others

10 Classification of **"Regular staff/employees"** and **"Non-regular staff/employees"** is as follows:

(1) A regular staff/employee is a person termed as general schedule employee or regular member by the company or organization for which the person is working;

(2) A non-regular staff/employee is a person termed as follows by the company or organization for which the person is working;

a. Part-time employee/casual staff

Regardless of hours or days worked, a person termed as "part-timer", "casual staff" or any other similar designation by the company or organization for which the person is working.

If it is not evident whether the employment status is "part-timer" or "casual staff", then how it is referred to or mentioned in a relevant recruitment advertising material, recruitment description or employment contract is to be relied on.

b. A temporary employee dispatched by a worker dispatching company

A person employed and dispatched by a worker dispatching company under the Worker Dispatching Act.

Any person not falling under the definition by the Act is not regarded as a "temporary employee dispatched by a worker dispatching company", even if the form of his/her employment is similar.

- c. **Contract staff**
A person employed on a contract basis in order to have the person engaged in a specialized job or a person employed for a prescribed period.
- d. **Contract-based worker**
Regardless of his/her working conditions or employment period, a person whose employment status is referred to as "contract-based worker" or any other similar designation by the company or organization for which the person is working.
- e. **Others**
Any person other than those mentioned in a. to d. above.

The above designations are applicable to persons in employment other than executives and falling under the definitions ① through ④ of the preceding section 8 where persons "with work" are grouped into ten categories.

- 11 **"Median"** is the border value separating the higher half of the income from the lower half.
- 12 **"Income quintile groups"** are obtained by dividing all households into five equal groups in accordance with the volume of income. The obtained groups are, respectively in the ascending order of income volume, referred to as the first, the second, the third, the fourth and the fifth quintile group, and boundary values dividing those groups are respectively referred to as the first, the second, the third, the fourth and the fifth quintile value (quintile boundary value).
- 13 **"Income types"** are classified as follows:
- (1) **Earned income**
Employee compensation, business income, agricultural/livestock farming income and industrial homework income are included in this category.
 - a. **Employee compensation**
The total of salaries, wages and bonuses paid to a household member by his/her employer and before taxes and social insurance premiums.
Allowances in kind (including securities and meals) provided in lieu of salary and other cash compensation are calculated at prevailing price and included in this category.
 - b. **Business income**
The amount obtained by subtracting the costs of goods purchased and other necessary expenses (excluding taxes and social insurance premiums; the same applies hereinafter) from income earned by a household member from his/her business (excluding agricultural/livestock farming businesses).
 - c. **Agricultural/livestock farming income**
The amount obtained by subtracting the costs of goods purchased and other necessary expenses from income earned by a household member from his/her agricultural/livestock farming business.
 - d. **Industrial homework income**
The amount obtained by subtracting necessary expenses from income earned by a household member from his/her industrial homework.
 - (2) **Public pension/Onkyu pension**
The amount of pension paid to a household member under the Public pension/Onkyu pension system (or the total amount paid from more than two pension systems).
 - (3) **Property income**
The amount obtained by subtracting necessary expenses from income (including allowance in kind) generated from the renting of a land/house owned by a household member as well as the amount obtained by subtracting necessary expenses from interests/dividends generated from savings, public/corporate bonds, stocks, etc. (including separate withholding tax).
 - (4) **Social security benefits other than Public pension**
 - a. **Unemployment insurance**
Unemployment benefits paid to a household member under the Employment Insurance Act.
 - b. **Child care allowance, etc.**
Child care allowance, Child rearing allowance, Special child rearing allowance, etc. paid to a household member.
 - c. **Other social security benefits**
Any other social security benefits paid to a household member other than those mentioned in (2) as well as a. and b. of this paragraph (4) (such as benefits under the Public Assistance Act). However, they exclude any allowance in kind.

- (5) Remitted allowance, Corporate pension, Personal pension and Other income
- Remitted allowance
Allowance remitted to a household member at regular intervals or on a continuous basis.
 - Corporate pension/Personal pension, etc.
Except for public pensions, the amount paid to a household member as a pension subject to the payment of insurance premiums for a prescribed period.
 - Other income
Income other than those mentioned in (1) to (4) as well as a. and b. of (5) above (such as allowance remitted temporarily, wedding gift money/obituary gift and other gift money).

14 **"Self-assessed living conditions"** means how respective households feel about their overall living conditions as of the date of the survey. Householders or persons representing their households selected their respective answers out of five conditions ("Very difficult", "Somewhat difficult", "Normal", "Somewhat comfortable", and "Very comfortable").

15 **"Disposable income"** is the amount obtained by subtracting income tax, inhabitant tax, social insurance premiums, fixed asset tax/city planning tax, and automobile tax, etc. from income for the household. In other words, "income" is pretax and "disposable income" is after-tax income.

16 **"Equivalent disposable income"** is the income calculated as follows. This is allocated to every household member, including children and other members with no income.

Old standard: Equivalent disposable income = (Total income - Contribution) ÷ √The number of household members

New standard: Equivalent disposable income = (Total income - Contribution - Premium - Others) ÷ √The number of household members

		Old standard	New standard
[Income]			
Total income	Initial income	Employee compensation Business income Agricultural and livestock farming income Industrial homework income Property income Remitted allowance Corporate pension, Personal pension, etc. Other income	Employee compensation Business income Agricultural and livestock farming income Industrial homework income Property income Remitted allowance Corporate pension, Personal pension, etc. Other income
	Security benefits	Public pension/Onkyu pension Unemployment insurance Child care allowance, etc. Other social security benefits	Public pension/Onkyu pension Unemployment insurance Child care allowance, etc. Other social security benefits
[Expenses]			
Contributions, etc.	Contributions	Taxes	Income tax Inhabitant tax Fixed asset tax
		Social insurance premiums	Medical insurance premium Pension insurance premium Long-term care insurance premium Unemployment insurance premium
	Premiums		Premiums for corporate pension
	Others		Remitted allowance

17 **"Poverty rate"** is calculated in accordance with OECD standards. "Adult" means a person aged 18 and over and "Child" means a person aged 17 and under. "Active household" means a household whose householder is aged 18 and over but under 65.

The "Income" used for the calculation includes social security benefits received as cash benefits but excludes any social security benefits in kind.

(1) Relative poverty rate

The percentage of household members living under the poverty line. The poverty line is a value which is half the median of the equivalent disposable income (refer to 16 "Equivalent disposable income" on page 44).

(2) Child poverty rate

The percentage of child(ren) aged 17 and under who live under the poverty line relative to the whole population of child aged 17 and under.

(3) Poverty rate of "Active households with child(ren)"

a. Poverty rate of "One-adult" households

The percentage, relative to the whole population of "One-adult households with child(ren) aged 17 and under" falling under the category of active household, of household members belonging to the said households who live under the poverty line.

b. Poverty rate of "Two-or-more-adults" households

The percentage, relative to the whole population of "Two-or-more adult households with a child or children aged 17 and under" falling under the category of active household, of household members belonging to the said households who live under the poverty line.

18 **"Inpatient"** means a person admitted to and staying at a hospital, clinic, or a long-term care insurance facility.

19 **"Person with subjective symptoms"** means a household member (except for inpatients) with subjective symptoms due to a disease or injury.

20 **"Ratio of person with subjective symptoms"** means the number of persons with subjective symptoms per thousand population. The number of household members used as the denominator includes inpatients, while the number of persons with subjective symptoms used as the numerator does not include inpatients.

21 **"Outpatient"** means a household member (except for inpatients) visiting hospital, clinic, Japanese traditional massage practitioner, acupuncture practitioner, moxa-cautery practitioner or Judo-orthopaedy practitioner.

22 **"Ratio of outpatients"** means the number of outpatients per thousand population. The number of household members used as the denominator includes inpatients but the number of outpatients used as the numerator does not include inpatients.

23 **"Health food such as supplements"** mean food processed into tablets, capsules, powders, liquids, etc. that contain ingredients that are considered to help maintain and improve health and do not include pharmaceuticals (including quasi-drugs), fresh food or additives. They do not also include snacks, prepared foods and others that are generally recognized as food from their appearance, shape, etc.

In addition, the label is not the key determinant since they are not always labeled as "Food for Specific Health Use", "Food with Nutrient Function Claims" and "Food with Function Claims".

24 **"Mental state"** is assessed with the K6 scale. The K6 scale was developed by Kessler et.al. in the U.S. for the purpose of screening mental illnesses such as depression and anxiety disorder, and has been widely used in surveys of the general public as an index to indicate the seriousness of mental problems including psychological stress.

Six questions, "Have you felt nervous?", "Have you felt hopeless?", "Have you felt restless or fidgety?", "Have you felt so depressed that nothing could cheer you up?", "Have you felt that everything was an effort?" and "Have you felt worthless?" are provided. Each question is scored in five grades: "None" (0 point), "A little" (1 point), "Some" (2 points), "Most" (3 points) and "All" (4 points), and points earned for the 6 questions are then added up. Higher scores indicate higher level of psychological distress.

- 25 **"Person requiring long-term care"** means a person who has been certified as requiring long-term care under the Long-Term Care Insurance Act (a. a person aged 65 and over and requiring long-term care, and b. a person aged 40 and over but under 65 and requiring long-term care, and the physical or mental problem which has resulted in the conditions requiring long-term care was caused by any of the Specified diseases), and who is stays at home.
- 26 **"Person requiring support"** means a person who has been certified as requiring support under the Long-Term Care Insurance Act (a. a person aged 65 and over and who is at risk of requiring support, and b. a person aged 40 and over but under 65 and who is at risk of requiring support, and the physical or mental problem which has resulted in such risk was caused by any of the Specified diseases), and who is stays at home.
- 27 **"Care requirement level"** is classified based on the "criterion times for certification of long-term care need, etc." as provided for in the "Ordinance on criterion, etc. for examination and judgment of long-term care need by the certification committee of required long-term care" (Ordinance of the Ministry of Health, Labour and Welfare No.32 of March 14, 2006).
Classification of criterion times for certification of long-term care need, etc.
- Direct daily life support – long-term care concerning bathing, toileting, feeding, etc.
 - Indirect daily life support – long-term care concerning laundry, cleaning, etc.
 - BPSD-related care – searching in the case of wandering, dealing with unclean behavior, etc.
 - Functional training activities – functional training such as walking training or daily life training
 - Medical care activities – assistance to medical treatment such as supervision of transfusion, treatment of bedsores, etc.
- (1) Support level 1
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 25 minutes or longer but shorter than 32 minutes or any condition equivalent thereto.
- (2) Support level 2
A condition where support specifically contributing to the mitigation or prevention of worsening of a condition requiring daily care on a continuous basis over a period of time for which a condition requiring support is expected to continue, and where the criterion time for certification of long-term care need, etc. for the above 5 areas is 32 minutes or longer but shorter than 50 minutes or any condition equivalent thereto.
- (3) Long-term care level 1
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 32 minutes or longer but shorter than 50 minutes or any condition equivalent thereto.
- (4) Long-term care level 2
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 50 minutes or longer but shorter than 70 minutes or any condition equivalent thereto.
- (5) Long-term care level 3
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 70 minutes or longer but shorter than 90 minutes or any condition equivalent thereto.
- (6) Long-term care level 4
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 90 minutes or longer but shorter than 110 minutes or any condition equivalent thereto.
- (7) Long-term care level 5
A condition where the criterion time for certification of long-term care need, etc. for the above 5 areas is 110 minutes or longer or any condition equivalent thereto.
