

## What is Live Births Statistics?

The Live Births Statistics 2010 refers to a specified report of vital statistics, compiling the results of multilateral analyses on trends in live births, including time-series and cohort analyses. These analyses use the data of vital statistics that published annually.

The Live Births Statistics 2010 is the sixth statistics of this kind, after the “Statistics on Birth Weights” in 1962, “Trends in Live Births by Region” in 1984, and Live Births Statistics in 1991, 2001 and 2005.

### (1) Symbols used in tables

—	No data
...	Data not available or indication of data inappropriate
•	Category not applicable
0.0	Figure less than 0.05
△	Negative

### (2) Note

The figures indicated are rounded off. Thus, the total may not equal to the “total number”.
