Notes:

- 1) Figures for 1944 - 1946 was omitted due to incomplete data. Figures for 1947 - 1972 do not include Okinawa Prefecture.
- 2) Totals for 1926, 1930 and 1935 each include 1 birth for which the sex is unknown.
- 3) The population used as the denominator to calculate the live birth rates is the total population until 1966, and the Japanese population from 1967 and after.
- 4) The population used as the denominator to calculate the total fertility rates is the Japanese population.

Notes:

- 1) "First marriage rates" refers to figures taken from the Notification of Conjugal Cohabitation filed for each year, and excludes brides who started their marital life in preceding years.
- 2) "Mean age at first marriage" refers to figures taken from the Notification of Conjugal Cohabitation filed for each year. "Mean age of first marriage" was calculated by adding 0.46 years to the arithmetical mean age based on date of birth and the month and year in which the bride began cohabiting with her spouse until 1991, and by using the age in years and months for 1992 and after.
The age by month and year in which the bride began cohabiting with her spouse refers to her age as of the wedding ceremony until 1967, and to the age as of the wedding ceremony or the start of cohabitation (whichever is earlier) in 1968 and after.

Notes:

- 1) We used the female population of each age for the calculation of all Japanese figures, and used the total female population for each 5-year age group for prefectural figures.
- 2) Figures of live birth rates for all Japan are calculated by dividing the total live birth rates for applicable ages by 5.
- 3) Figures of total fertility rates for all Japan are the sums of the live birth rates at each age of mothers, between 15 and 49 years old.
The figures for each prefecture are the sums of the live birth rates for the 5-year age groups multiplied by 5.
