Notes:1) The figures for 1944 to 1946 are omitted due to the lack of materials. The figures for 1947 to 1972 do not include those for Okinawa.

2)The live births for each of 1926, 1930 and 1935 include one birth of unknown gender.

3)With respect to the denominator population used for the calculation of live birth rates, the total population is used for 1966 and before, and the Japanese population is used for 1967 and later.

4)The Japanese population is used as the denominator population in the calculation of total fertility rates.

Notes: 1)The figures are for legitimate first live births.

2)The percentage distribution is against the total excluding those first live births for which the duration of marriage is unknown.

3)"0 months" refers to the case where the month of birth is the same as the month of commencement of conjugal cohabitation.

Notes: 1)We used the Japanese female population by age for the calculation of the nationwide figures and used, for the prefectural figures, the Japanese female population classified into 5-year age groups.
 2)The nationwide total fertility rate is the sum of live birth rates for the ages of mothers from 15 to 49 years, and each of the prefectural figures is the sum of the prefecture's fivefold live birth rates by 5-year age group.
