- (Notes)
- Seasonally adjusted figures are calculated by removing seasonal components from the original series,using the US Census method(X-12-ARIMA).
The values prior to December 2024 have been adjusted by using the new seasonal indexes at the time of issuance of the January 2025 data.
 - ▲ means decrease.
 - The active job openings-to-applicants ratio for regular staff is calculated by dividing monthly active job openings for regular staff by monthly active applications for regular workers excluding part-timers. However, this ratio is lower than that in a strict sense because monthly active applications for regular workers excluding part-timers include dispatch and contract workers.
 - "Regular workers" refer to either a work without fixed employment term or a work with fixed term of more than 4 months (excluding seasonal work).
 - "Part-timers" refer to those employees whose scheduled working hour is less than that of the regular employees in the same workplace.
