Establishing ‘the Community-based Integrated Care System’

○By 2025 when the baby boomers will become age 75 and above, a structure called ‘the Community-based Integrated Care System’ will be established that comprehensively ensures the provision of health care, nursing care, prevention, housing, and livelihood support. By this, the elderly could live the rest of their lives in their own ways in environments familiar to them, even if they become heavily in need for long-term care.

○As the number of elderly people with dementia is estimated to increase, establishment of the Community-based Integrated Care System is important to support community life of the elderly with dementia.

○The progression status varies place to place; large cities with stable total population and rapidly growing population of over 75, and towns and villages with decrease of total population but gradual increase of population over 75.

○It is necessary for municipalities as insurers of the Long-term Care Insurance System as well as prefectures to establish the Community-based Integrated Care System based on regional autonomy and independence.

*The Community-based Integrated Care System is conceived in units of every-day living areas (specifically equivalent to district divisions for junior high-schools) in which necessary services can be provided within approximately 30 minutes.*
By 2025 when the baby boomers will become age 75 and above, a structure called ‘the Community-based Integrated Care System’ will be established that comprehensively ensures the provision of health care, nursing care, prevention, housing, and livelihood support. By this, the elderly could live the rest of their lives in their own ways in environments familiar to them, even if they become heavily in need for long-term care.

As the number of elderly people with dementia is estimated to increase, establishment of the Community-based Integrated Care System is important to support community life of the elderly with dementia.

The progression status varies place to place; large cities with stable total population and rapidly growing population of over 75, and towns and villages with decrease of total population but gradual increase of population over 75.

It is necessary for municipalities as insurers of the Long-term Care Insurance System as well as prefectures to establish the Community-based Integrated Care System based on regional autonomy and independence.
Community General Support Center

The Community General Support Center is a facility, established by municipalities and staffed with public health nurses, social workers, chief long-term care support specialists, and other experts, to comprehensively support local residents by providing necessary assistance for the residents to maintain their health and have stable livelihood. (Long-Term Care Insurance Act, Article 115-46, Paragraph 1)

- General consultation and support
  - Widely accepts requests for consultation from residents and provides support across various systems
- Provision of multilateral support (across systems)
  - Connecting necessary services at government agencies, health center, medical institutions, and child consultation centers
- Advocacy
  - Promotes the use of adult guardianship system, respond to abuse of senior citizens
- Comprehensive, continuous care management support
  - Care management support to help senior citizens gain independence, through “regional care meetings”
  - Regular one-to-one supervision and consultation of care managers
  - Supervision and advice on difficult-to-support cases
- Social worker, etc.
- Chief care manager, etc.
- Public health nurse, etc.
- Team approach
- There are 5,041 centers nationwide (7,308 if branches are included)
  - As of the end of April 2017. Established in all municipalities
  - Endorsing establishment of the centers in daily life spheres
- Drafting of long-term care prevention care plan for those who can potentially fall into a state requiring support or long-term care
