

Figure 3. Nerve nuclei of the medulla oblongata

Figure 4.

The actual specimen is divided into two along the major axis of the medulla oblongata. Confirm the position of the obex (1), and section the specimens. The sectioned slice (2; of a separate specimen). Section at 3 mm intervals as if slicing off the surface from the head-side, then place in plastic cassettes (3). Pay attention to the order and the surface of sectioning.
