

### Detailed Data 3 Estimated Numbers Related to Diabetes

Age	Male (investigation objects: 1,619 men)		Female (investigation objects: 2,384 women)	
	Those strongly suspected of having diabetes	Those with possibilities of having diabetes	Those strongly suspected of having diabetes	Those with possibilities of having diabetes
20 - 29	1.1%	0%	0%	0.9%
30 - 39	3.0%	3.0%	0.5%	5.4%
40 - 49	7.6%	11.0%	2.9%	10.4%
50 - 59	12.1%	16.7%	5.6%	20.8%
60 - 69	22.1%	17.3%	14.1%	18.2%
70 -	22.6%	18.4%	11.0%	23.8%

When the above figures are applied to the estimated population as of October 1, 2007, the estimated numbers nationwide are as follows:

- Those strongly suspected of having diabetes: approximately 8.9 million people
- Those with possibilities of having diabetes: approximately 13.2 million people
