(Notes)

1. The figures for donors and transplantations practiced represent the cumulative total from October 16, 1997 (the day of the enforcement of the Organ Transplantation Law) to March 31, 2009 . The figures for patients on waiting lists are as of March 31, 2009.
2. There have been 71 brain death tests conducted nationwide under the Organ Transplantation Act since the enforcement of the law to March 31, 2009. For the eighth case, the donor was determined legally brain dead, but the organ was not removed for medical reasons. Therefore the case is not included in the number of donors.
