

# Political Message from Panel-3

1. Prioritize patient safety as part of UHC strategies, to reduce patient harm, improve efficiency, save costs, secure progress in patient safety and protect human capital
2. Invest sufficient resources in building leadership capacity and HR capabilities for improving patient safety at all levels of health care, in particular at the primary care
3. Provide political support and commitment for the implementation of the WHO's Global Patient Safety Challenge: Medication Without Harm, in order to reduce severe, avoidable harm associated with medications
4. Establish systems of patient safety measurement, monitoring and evaluation, promote a blame free culture for adverse event reporting, and report transparently to the public
5. Establish systems for patient and family engagement to bring patient and family voices to decisions about care, to healthcare organizational design and governance, and to public policy.
