

	Item	Field Value	Definition/Explanation	UMIN
18	Recruitment Status		<p>Recruitment status of this trial.</p> <p>Pending: participants are not yet being recruited or enrolled at any site</p> <p>Active: participants are currently being recruited and enrolled</p> <p>Temporary halt: there is a temporary halt in recruitment and enrollment</p> <p>Closed: participants are no longer being recruited or enrolled</p>	試験進捗状況
19	Primary Outcome(s)	<p>Outcome Name Timepoints Click to add more outcomes...</p>	<p>Outcomes are events, variables, or experiences that are measured because it is believed that they may be influenced by the intervention.</p> <p>The Primary Outcome should be the outcome used in sample size calculations, or the main outcome(s) used to determine the effects of the intervention(s).</p> <p>Enter the names of all primary outcomes in the trial as well as the pre-specified timepoint(s) of primary interest.</p> <p>Be as specific as possible with the metric used (e.g., "% with Beck Depression Score > 10" rather than just "depression"). Examples: Outcome Name: all-cause mortality, Timepoints: 5 years; or Outcome Name: Mean Beck Depression Score, Timepoint: 18 weeks</p>	<p>主要アウトカム評価項目</p> <p>時点のカラムはない。</p>
20	Key Secondary Outcomes	<p>Outcome Name Timepoints Click to add more outcomes...</p>	<p>Secondary outcomes are events, variables, or experiences that are of secondary interest or that are measured at timepoints of secondary interest.</p> <p>A secondary outcome may involve the same event, variable, or experience as the primary outcome, but measured at timepoints other than those of primary interest (e.g., Primary outcome: all-cause mortality at 5 years; Secondary outcome: all-cause mortality at 1 year, 3 years), or may involve a different event, variable, or experience altogether (e.g., Primary outcome: all-cause mortality at 5 years; Secondary outcome: hospitalization rate at 5 years).</p> <p>Enter the name and timepoint(s) for all secondary outcomes of clinical and/or scientific importance. Be as specific as possible with the metric used (e.g., "% with Beck Depression Score > 10" rather than just "depression").</p> <p>Examples: Outcome Name: all-cause mortality, Timepoint: 6 months, 1 year; or Outcome Name:</p>	<p>副次アウトカム評価項目</p> <p>時点のカラムはない。</p>
