Exchange of knowledge

Leon Bax, PhD

Leon Bax is Assistant Professor of Clinical Epidemiology at the UMC Utrecht. His primary affiliation is with Kitasato University, where he is Junior Associate Professor of Clinical Epidemiology and Biostatistics at the Kitasato Clinical Research Center. He is in charge of developing the clinical research education and is supervising the methodological consultancy for investigator-initiated clinical studies at the Kitasato University School of Medicine. He is involved in numerous clinical research projects and is the lead statistician and programmer for the MIX meta-analysis software project.

The Kitasato Clinical Trial Group

Clinical trials are essential for drug development and evaluation of clinical interventions. Kitasato University and the Kitasato Institute have a long-standing reputation for initiating and participating in clinical trials. Uniting all clinical research entities inside our organization, the Kitasato Clinical Trial Group has the largest phase I trial capacity in Japan (105 beds). In addition, we have 4 university hospitals and an extensive regional hospital network and we can offer facilities for the entire spectrum of drug and medical device development. Internationally, we work closely together with a number of institutions in Korea, Taiwan, China, USA, and the Netherlands.

With the recent creation of the Clinical Research Center at the School of Medicine, we are extending the facilities and support for investigator-initiated clinical studies and have created a central communication hub to coordinate the transition of all parties in the Kitasato Clinical Trial Group into a multifunctional academic clinical research organization. In the near future, a central IRB and central data center will further contribute to the efficient and high-quality conduct of clinical research.

This Web site can be used as a portal to learn more about the members of the Kitasato Clinical Trial Group and as such we hope it will facilitate the design and conduct of new local and global clinical trials.
